### PROJECT OVERVIEW

The primary objective of the Redding Airport project was to improve passenger flow and give the facility's a face lift. Around 10,000 square feet was added to the facility including a new TSA building and holding room for passengers after they go through screening. This state funded project also included updating baggage claim systems, rental car ports, tarmac expansion, new restrooms and repairing defective, outdated work as needed. The airport remained fully functional the entire project with security remaining a top priority.
