Middleton ID - Excelerite® distributor Nathan Marks of M&M Ag Supply in Nampa, ID shows off his customers amazing corn test plot results at the King Ranch.

With an application rate last year (2012) of Excelerite® @ 1,000 lb. per acre, and this year (2013) being a very dry year, the word is spreading about the corn fields, as well as other Excelerite® crops.

As you can see in the photo above the corn to the left has been treated with Excelerite® and to the right is without, the results explain it's self in the photo.

The photos to the right are both recent photos taken at the same time, both crops planted at the same time, same field, same watering, the only difference is that last year the one side was treated with Excelerite® and the bottom photo is without.
