Important

Read, understand and obey these safety rules and operating instructions before operating this machine. Only trained and authorized personnel shall be permitted to operate this machine. This manual should be considered a permanent part of your machine and should remain with the machine at all times. If you have any questions, call us.

Owners, Users and Operators:

Genie appreciates your choice of our machine for your application. Our number one priority is user safety, which is best achieved by our joint efforts. We feel that you make a major contribution to safety if you, as the equipment users and operators:

1 **Comply** with employer, job site and governmental rules.
2 **Read, understand and follow** the instructions in this and other manuals supplied with this machine.
3 **Use good safe work practices** in a commonsense way.
4 **Only have trained/certified operators**, directed by informed and knowledgeable supervision, running the machine.

If there is anything in this manual that is not clear or which you believe should be added, please contact us.

---

**Introduction**

**Danger**

Failure to obey the instructions and safety rules in this manual will result in death or serious injury.

**Do Not Operate Unless:**

- You learn and practice the principles of safe machine operation contained in this operator's manual.
- **Avoid hazardous situations.**
  - Know and understand the safety rules before going on to the next section.
- 2 Always perform a pre-operation inspection.
- 3 Always perform function tests prior to use.
- 4 Inspect the workplace.
- 5 Only use the machine as it was intended.
- You read, understand and obey the manufacturer's instructions and safety rules—safety and operator's manuals and machine decals.
- You read, understand and obey employer's safety rules and work site regulations.
- You read, understand and obey all applicable governmental regulations.
- You are properly trained to safely operate the machine.
Introduction

Hazard Classification
Genie uses symbols, color coding and signal words to identify the following:

Safety alert symbol—used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

⚠️ DANGER
Red
Indicates a hazardous situation which, if not avoided, will result in death or serious injury.

⚠️ WARNING
Orange
Indicates a hazardous situation which, if not avoided, could result in death or serious injury.

⚠️ CAUTION
Yellow
Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

⚠️ NOTICE
Blue
Indicates a hazardous situation which, if not avoided, could result in property damage.

Intended Use
This machine is intended to be used only to lift personnel, along with their tools and materials to an aerial work site.

Safety Sign Maintenance
Replace any missing or damaged safety signs. Keep operator safety in mind at all times. Use mild soap and water to clean safety signs. Do not use solvent-based cleaners because they may damage the safety sign material.

General Safety

Safety signs and locations

Tip-over Hazard
Failure to replace tires with tires of same specification will result in death or serious injury.

Lug Nut Torque
Dry bolts: 420 ft-lbs / 569.5 Nm
Lubricated bolts: 320 ft-lbs / 433.9 Nm

Failure to replace tires with tires of same specification will result in death or serious injury. Do not use air-filled tires. Foam-filled tires are critical to machine stability. Do not replace factory-installed tires with tires of different specification or ply rating.

Tire Size
445/65 D22.5, 18 ply Foam-filled

Electrocution/Burn Hazard
Failure to disconnect all the batteries before performing service on this machine may result in death or serious injury. Disconnect all the batteries before performing service on this machine.

Compartment access is restricted. Contact with components under any cover may result in serious injury.

Only trained maintenance personnel should access compartments. Access by operators is only advised when performing Pre-operation Inspection. All compartments must remain closed and secured during operation.

Crush Hazard
Death or serious injury may result from platform crushing personnel against boom.

Keep away from path of moving platform.

Crush Hazard
Contact with moving parts can result in death or serious injury.

Keep away from moving parts.

Explosion Hazard
Death or serious injury can result from the use of either or other high energy starting aids.

Do not use other or other high energy starting aids on machines equipped with glow plugs.

Disconnect the batteries before performing service on this machine.

Part No. 114474 Z-135/70
General Safety

Safety signs and locations

**DANGER**

Failure to read, understand and obey the operator’s manual and the following safety rules will result in death or serious injury.

**Fire Hazard**

Keep combustible materials away from hot surfaces and fire areas. Do not store or use combustible materials in the engine area.

**Bodily Injury**

Failure to use pipe cradle assembly according to instructions and safety rules below and in operator’s and responsibilities manual could result in death or serious injury.

- Do not exceed rated platform capacity.
- Pipe cradle assembly and weight in pipe cradles will reduce rated platform capacity and must be factored into total platform load.
- Pipe cradle assembly weighs 25 lbs (11kg).
- Maximum capacity of pipe cradle assembly is 200 lbs (91 kg).
- Weight of pipe cradle assembly and load in pipe cradles may limit maximum number of occupants in platform.
- Center load within perimeter of platform.
- Secure load to platform.
- Do not obstruct entrance/exit of platform.
- Do not obstruct ability to operate platform controls or Emergency Stop button.
- Do not operate unless you are adequately instructed and are aware of all hazards associated with movement of platform with overhanging load.
- Do not cause a horizontal force or side load to machine by raising or lowering a fixed or overhanging load.
- Do not exceed rated platform capacity. Combined weight of cradles, panels, occupants, tools and any other equipment must not exceed rated capacity.
- Panel cradle assembly weighs 30 lbs / 13.6 kg.
- Maximum capacity of panel cradles is 250 lbs / 113 kg.
- Weight of panel cradles and load in panel cradles may limit maximum number of occupants in platform to one person.
- Secure cradles to platform.
- Secure panel(s) to platform railing using straps provided.
- Do not operate unless you are adequately instructed and are aware of all hazards associated with lifting panels.

**Tip-over Hazard**

If tilt-alarm sounds, unit is on a severe slope. Death or serious injury will result.

Platform uphill:
1. Lower primary boom.
2. Retract/lower secondary boom.
3. Retract primary boom.

Platform downhill:
1. Retract primary boom.
2. Retract/lower secondary boom.
3. Lower primary boom.

- Read operator’s manual before attempting to move machine.
- Stop all movement.

**WARNING**

Do not overload platform.

- Welder power supply reduces rated platform capacity and must be factored into total platform load.
- Do not overload platform.
- Welder power supply weighs 75 lbs / 34 kg.

- Read and understand Operator’s Manual, Responsibilities Manual and Safety Manual and all safety signs before using or maintaining machine.
- If you do not understand the information in the manuals, consult your supervisor, the owner or the manufacturer.

**Component Damage**

Failure to properly connect and use the weld box to perform could result in death or serious injury. Follow instructions. Keep power supply and welder completely dry. Do not overload power supply or welder.
General Safety

Safety signs and locations

**General Safety**

*Electrocution/Burn Hazard*
Failure to disconnect all the batteries before performing service on this machine may result in death or serious injury. Disconnect all the batteries before performing service on this machine.

*Tip-over Hazard*
Altering or disabling angle sensor can result in machine tip-over. Machine tip-over will result in death or serious injury. Do not move, alter or disable angle sensor.

*Lug Nut Torque*

- Dry bolts: 420 ft-lbs / 569.5 Nm
- Lubricated bolts: 320 ft-lbs / 433.9 Nm

*Tip-over Hazard*

Failure to replace tires with tires of same specification will result in death or serious injury. Do not use air-filled tires. Foam-filled tires are critical to machine stability. Do not replace factory-installed tires with tires of different specification or ply rating.

Personal Safety

Fall Protection

Personal fall protection equipment (PFPE) is required when operating this machine.

Occupants must wear a safety belt or harness in accordance with governmental regulations. Attach the lanyard to the anchor provided in the platform.

Operators must comply with employer, job site and governmental rules regarding the use of personal protective equipment.

All PFPE must comply with applicable governmental regulations, and must be inspected and used in accordance with the PFPE manufacturer’s instructions.
Work Area Safety

Electrocution Hazards

This machine is not electrically insulated and will not provide protection from contact with or proximity to electrical current.

Maintain safe distances from electrical power lines and apparatus in accordance with applicable governmental regulations and the following chart.

<table>
<thead>
<tr>
<th>Line Voltage</th>
<th>Required Clearance</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 to 50KV</td>
<td>10 ft 3.0 m</td>
</tr>
<tr>
<td>50 to 200KV</td>
<td>15 ft 4.6 m</td>
</tr>
<tr>
<td>200 to 350KV</td>
<td>20 ft 6.1 m</td>
</tr>
<tr>
<td>350 to 500KV</td>
<td>25 ft 7.6 m</td>
</tr>
<tr>
<td>500 to 750KV</td>
<td>35 ft 10.6 m</td>
</tr>
<tr>
<td>750 to 1000KV</td>
<td>45 ft 13.7 m</td>
</tr>
</tbody>
</table>

Allow for platform movement, electrical line sway or sag and beware of strong or gusty winds.

Keep away from the machine if it contacts energized power lines. Personnel on the ground or in the platform must not touch or operate the machine until energized power lines are shut off.

Do not use the machine as a ground for welding.

Do not operate the machine during lightning or storms.

Before performing service on this machine, disconnect the batteries under both turntable covers.

Tip-over Hazards

Occupants, equipment and materials shall not exceed the maximum platform capacity.

Maximum platform capacity 600 lbs 272 kg
Maximum occupants 2

The weight of options and accessories, such as pipe cradles, panel cradles and welders, will reduce the rated platform capacity and must be subtracted from the platform capacity. See the decals with the options and accessories.

If using accessories, read, understand and obey the decals, manuals and instructions with the accessory.
Do not raise or extend the boom unless the machine is on a firm, level surface.

Do not depend on the tilt alarm as a level indicator. The tilt alarm sounds in the platform only when the machine is on a severe slope.

If the tilt alarm sounds while the boom is lowered: Do not extend, rotate or raise the boom above horizontal. Move the machine to a firm, level surface before raising the platform.

If the tilt alarm sounds when the platform is raised: Use extreme caution. Identify the condition of the boom on the slope as shown below. Follow the steps to lower the boom before moving to a firm, level surface. Do not rotate the boom while lowering.

If the tilt alarm sounds with the platform uphill:
1. Lower the primary boom.
2. Retract/lower the secondary boom.
3. Retract the primary boom.

If the tilt alarm sounds with the platform downhill:
1. Retract the primary boom.
2. Retract/lower the secondary boom.
3. Lower the primary boom.

Do not raise the boom when wind speeds may exceed 28 mph / 12.5 m/s. If wind speeds exceed 28 mph / 12.5 m/s when the boom is raised, lower the boom and do not continue to operate the machine.

Do not operate the machine in strong or gusty winds. Do not increase the surface area of the platform or the load. Increasing the area exposed to the wind will decrease machine stability.

Use extreme care and slow speeds while driving the machine in the stowed position across uneven terrain, debris, unstable or slippery surfaces and near holes and drop-offs.

Do not drive the machine on or near uneven terrain, unstable surfaces or other hazardous conditions with the boom raised or extended.
Work Area Safety

Do not use the machine as a crane.

Do not push the machine or other objects with the boom.

Do not contact adjacent structures with the boom.

Do not tie the boom or platform to adjacent structures.

Do not place loads outside the platform perimeter.

Do not push off or pull toward any object outside of the platform.

Maximum allowable side force - ANSI & CSA
150 lbs / 667 N

Maximum allowable manual force - Australia
90 lbs / 400 N

Do not use air-filled tires. These machines are equipped with foam-filled tires. Wheel weight is critical to stability.

Do not modify or alter an aerial work platform without prior written permission from the manufacturer. Mounting attachments for holding tools or other materials onto the platform, toeboards or guard rail system can increase the weight in the platform and the surface area of the platform or the load.

Do not place or attach overhanging loads to any part of this machine.

Do not place ladders or scaffolds in the platform or against any part of this machine.

Do not transport tools and materials unless they are evenly distributed and can be safely handled by person(s) in the platform.

Do not use the machine on a moving or mobile surface or vehicle.

Be sure all tires are in good condition and lug nuts are properly tightened.

Work Area Safety

⚠️ Operation on Slopes Hazards

Do not drive the machine on a slope that exceeds the maximum uphill, downhill or side slope rating of the machine. Slope rating applies only to machines in the stowed position.

<table>
<thead>
<tr>
<th>Maximum slope rating, stowed position</th>
</tr>
</thead>
<tbody>
<tr>
<td>Platform downhill</td>
</tr>
<tr>
<td>Platform uphill</td>
</tr>
<tr>
<td>Side slope</td>
</tr>
</tbody>
</table>

Note: Slope rating is subject to ground conditions and adequate traction. See Driving on a Slope in the Operating Instructions Section.

⚠️ Fall Hazards

Occupants must wear a safety belt or harness in accordance with governmental regulations. Attach the lanyard to the anchor provided in the platform.

Do not sit, stand or climb on the platform guard rails. Maintain a firm footing on the platform floor at all times.

Do not climb down from the platform when raised.

Keep the platform floor clear of debris.

Lower the platform entry mid-rail or close the entry gate before operating.

Do not enter or exit the platform unless the machine is in the stowed position and the platform is at ground level.
Work Area Safety

⚠️ Collision Hazards

Be aware of limited sight distance and blind spots when driving or operating.

Be aware of the boom position and tailswing when rotating the turntable.

Be aware of machine length when operating. The machine is 42 ft 5 inches / 12.9 m long.

Check the work area for overhead obstructions or other possible hazards.

Be aware of the boom position and tailswing when rotating the turntable.

Be aware of machine length when operating. The machine is 42 ft 5 inches / 12.9 m long.

No stunt driving or horseplay while operating a machine.

Do not lower the boom unless the area below is clear of personnel and obstructions.

Limit travel speed according to the condition of the ground surface, congestion, slope, location of personnel, and any other factors which may cause collision.

⚠️ Bodily Injury Hazard

Do not operate the machine with a hydraulic oil or air leak. An air leak or hydraulic leak can penetrate and/or burn skin.

Always operate the machine in a well-ventilated area to avoid carbon monoxide poisoning.

Improper contact with components under any cover will cause serious injury. Only trained maintenance personnel should access compartments. Access by the operator is only advised when performing a pre-operation inspection. All compartments must remain closed and secured during operation.

Do not operate a boom in the path of any crane unless the controls of the crane have been locked out and/or precautions have been taken to prevent any potential collision.
**Work Area Safety**

⚠️ **Explosion and Fire Hazards**

Do not start the engine if you smell or detect liquid petroleum gas (LPG), gasoline, diesel fuel or other explosive substances.

Do not refuel the machine with the engine running.

Refuel the machine and charge the battery only in an open, well-ventilated area away from sparks, flames and lighted tobacco.

Do not operate the machine in hazardous locations or locations where potentially flammable or explosive gases or particles may be present.

Do not spray ether into engines equipped with glow plugs.

⚠️ **Damaged Machine Hazards**

Do not use a damaged or malfunctioning machine.

Conduct a thorough pre-operation inspection of the machine and test all functions before each work shift. Immediately tag and remove from service a damaged or malfunctioning machine.

Be sure all maintenance has been performed as specified in this manual and the appropriate Genie service manual.

Be sure all decals are in place and legible.

Be sure the operator’s, safety and responsibilities manuals are complete, legible and in the storage container located on the platform.

⚠️ **Component Damage Hazards**

Do not use any battery or charger greater than 12V to jump-start the engine. Apply jumper cables to the starter and controls battery, not the auxiliary power batteries.

Do not use the machine as a ground for welding unless the machine is equipped with the weld line to platform option and it is properly connected.

⚠️ **Battery Safety**

**Burn Hazards**

Batteries contain acid. Always wear protective clothing and eye wear when working with batteries.

Avoid spilling or contacting battery acid. Neutralize battery acid spills with baking soda and water.

**Explosion Hazard**

Keep sparks, flames and lighted tobacco away from batteries. Batteries emit explosive gas.

**Electrocution Hazard**

Avoid contact with electrical terminals.
Work Area Safety

⚠ Pipe Cradle Safety
Read, understand and obey all warnings and instructions provided with the pipe cradles.

Do not exceed the rated platform capacity. The pipe cradle assembly and the weight in the pipe cradles will reduce rated platform capacity and must be factored into total platform load.

The pipe cradle assembly weighs 21 lbs / 9.5 kg.

The maximum capacity of the pipe cradle assembly is 200 lbs / 91 kg.

The weight of the pipe cradle assembly and the load in the pipe cradles may limit the maximum number of occupants in platform.

Center the load within the perimeter of the platform.

Secure the load to the platform.

Do not obstruct the entrance or the exit of the platform.

Do not obstruct the ability to operate the platform controls or the red Emergency Stop button.

Do not operate unless you are adequately instructed and are aware of all of the hazards associated with movement of the platform with an overhanging load.

Do not cause a horizontal force or side load to the machine by raising or lowering a fixed or overhanging load.

Electrocution Hazard: Keep pipes away from all energized electrical conductors.

⚠ Panel Cradle Safety
Read, understand and obey all warnings and instructions provided with the panel cradles.

Do not exceed the rated platform capacity. The combined weight of the cradles, panels, occupants, tools and any other equipment must not exceed rated capacity.

The panel cradle assembly weighs 30 lbs / 13.6 kg.

The maximum capacity of the panel cradles is 250 lbs / 113 kg.

The weight of the panel cradles and the load in the panel cradles may limit the maximum number of occupants in platform to one person.

Secure the cradles to the platform. Secure the panel(s) to the platform railing using the straps provided.

Do not operate unless you are adequately instructed and are aware of all hazards associated with lifting panels.

Do not cause a horizontal force or side load to machine by raising or lowering a fixed or overhanging load.

Maximum vertical height of panels: 4 ft / 1.2 m

Maximum wind speed: 15 mph / 6.7 m/sec

Maximum panel area: 32 sq. ft / 3 m²

Work Area Safety

⚠️ Welder Safety

Read, understand and obey all warnings and instructions provided with the welding power unit.

Do not connect weld leads or cables unless the welding power unit is turned off at the platform controls.

Do not operate unless the weld cables are properly connected and the welder is properly grounded.

The weight of the welder will reduce the rated platform capacity and must be factored into the total platform load. The welder power supply weighs 75 lbs / 34 kg.

Do not operate the welder unless a fire extinguisher is immediately available for instant use, per OSHA regulation 1926.352(d).

⚠️ Weld Line to Platform Safety

Read, understand and obey all warnings and instructions provided with the welding power unit.

Do not connect weld leads or cables unless the welding power unit is turned off at the platform controls.

Do not operate unless the weld cables are properly connected.

Connect the positive lead to the twist-lock connector at the turntable and platform.

Clamp the negative lead to the ground post at the turntable and platform.

Lockout After Each Use

1 Select a safe parking location—firm level surface, clear of obstruction and traffic.

2 Retract and lower the boom to the stowed position.

3 Rotate the turntable so that the boom is between the non-steer wheels.

4 Turn the key switch to the off position and remove the key to secure from unauthorized use.

5 Chock the wheels.

Ground Control Panel

1 LCD readout screen
   a low fuel indicator
   b engine oil pressure indicator
   c water temperature indicator
   d auxiliary power indicator
   e high engine rpm indicator
   f hour meter

2 Red Emergency Stop button
   Push in red Emergency Stop button to the off position to stop all functions and turn the engine off. Pull out the red Emergency Stop button to the on position to operate the machine.

3 Glow plug button
   Push the glow plug button and hold for 3 to 5 seconds.

4 Key switch for off/ground/platform selection
   Turn the key switch to the off position and the machine will be off. Turn the key switch to the ground position and the ground controls will operate. Turn the key switch to the platform position and the platform controls will operate.

5 Engine start button
   Push the engine start button and the engine will start.

6 Jib boom up/down buttons
   Push the jib boom up button and the jib boom will raise. Push the jib boom down button and the jib boom will lower.

7 Platform level up/down buttons
   Push the platform level up button and the level of the platform will raise. Push the platform level down button and the level of the platform will lower.

8 Primary boom extend/retract buttons
   Push the primary boom extend button and the primary boom will extend. Push the primary boom retract button and the primary boom will retract.

9 20A circuit breaker for system circuit

10 Alarm

11 Platform rotate left/right buttons
   Push the platform rotate left button and the platform will rotate to the left. Push the platform rotate right button and the platform will rotate to the right.

12 Jib boom extend/retract buttons
   Push the jib boom extend button and the jib boom will extend. Push the jib boom retract button and the jib boom will retract.

13 High speed function enable button
   Push the high speed function enable switch to enable the functions on the ground control panel to operate at high speed.

14 Low speed function enable button
   Push the low speed function enable switch to enable the functions on the ground control panel to operate at low speed.

15 Emergency/Auxiliary power button
   Use emergency/auxiliary power if the primary power source (engine) fails. Simultaneously push the emergency/auxiliary power button and activate the desired function.
Controls

16 Turntable rotate left/right buttons
   Push the turntable rotate left button and the turntable will rotate to the left. Push the turntable rotate right button and the turntable will rotate to the right.

17 Secondary boom up/extend and down/retract buttons
   Push the secondary boom up/extend button and the secondary boom will raise and then extend. Push the secondary boom down/retract button and the secondary boom will retract and then lower.

18 Primary boom up/down buttons
   Push the primary boom up button and the primary boom will raise. Push the primary boom down button and the primary boom will lower.

19 LCD screen control buttons

20 Engine speed select button
   Push the engine speed select button to select the engine speed. When the arrow above the rabbit is lit, the engine is in high idle speed. When the arrow above the turtle is lit, the engine is in low idle speed.

21 Primary boom down button
   Push the primary boom down button and the primary boom will lower.

22 Primary boom up button
   Push the primary boom up button and the primary boom will raise.
Controls

Z-135 machines will have one of these two styles of platform control panel. The descriptions in this section and the instructions in the Function Test and Operating Instructions sections apply to both panels, unless specifically noted.
Controls
Controls

Platform Control Panel

1 Horn button
   Press the button and the horn will sound. Release the button and the horn will stop.

2 Platform not level indicator light
   Level the platform until the light is off. The switch will only work in the direction that will level the platform.

3 Machine on incline indicator light
   Light on indicates all functions have stopped. See the instructions in the Operating Instructions section.

4 Lower primary boom indicator light
   Lower the primary boom until the light is off.

5 Lower / retract secondary boom indicator light
   Lower/retract the secondary boom until the light is off.

6 Used for optional equipment

7 Generator control with indicator light (if equipped)
   Move the switch or push the button to turn the generator on. Move the switch again or release the button to turn the generator off.

8 Emergency/Auxiliary power control with indicator light
   Use emergency/auxiliary power if the primary power source (engine) fails.
   Move and hold the switch, or push and hold the button. Activate the desired function. The indicator light will be on when emergency/auxiliary power is being used.

9 Glow plug control with indicator light
   Move the switch or push the button to activate the glow plugs.

10 Engine start control with indicator light
   Move the switch or push the button and the engine will start. The indicator light will be on when the switch is moved or the button is pushed.

11 Engine idle control with indicator light
   Move the switch or push the button to select engine idle setting. The indicator light next to the current engine idle setting will be on.

12 Not used

13 Power indicator light
   Light on indicates the machine is on.

14 Check engine indicator light
   Light on indicates an engine fault.

15 Low fuel indicator light
   Light on indicates the machine is low on fuel.

16 Fault indicator light
   Light on indicates a system fault.

17 Red Emergency Stop button
   Push in the red Emergency Stop button to the off position to stop all functions and turn the engine off. Pull out the red Emergency Stop button to the on position to operate the machine.
18 Dual axis proportional control handle for drive and steer functions OR Proportional control handle for drive function and thumb rocker for steer function.

Move the control handle in the direction indicated by the blue arrow on the control panel and the machine will drive forward. Move the control handle in the direction indicated by the yellow arrow and the machine will drive backwards. Move the control handle in the direction indicated by the blue triangle and the machine will steer to the left. Move the control handle in the direction indicated by the yellow triangle and the machine will steer to the right.

OR

Move the control handle in the direction indicated by the blue arrow on the control panel and the machine will drive forward. Move the control handle in the direction indicated by the yellow arrow and the machine will drive backwards. Press the left side of the thumb rocker and the machine will steer to the left. Press the right side of the thumb rocker and the machine will steer to the right.

19 Steer mode control with indicator lights

Move the switch or push the button to choose steer mode.

The indicator light next to the current steer mode will be on.

20 Single axis proportional control handle for secondary boom up/extend and down/retract function

Move the control handle up and the secondary boom will raise and then extend. Move the control handle down and the secondary boom will retract and then lower.

21 Drive control with indicator lights

Move the switch or push the button to choose the drive setting. The indicator light next to the current setting will be on.

22 Thumb rocker for jib boom extend/retract function

Push the top of the rocker switch and the jib boom will retract. Push the bottom of the rocker switch and the jib boom will extend.

23 Dual axis proportional control handle for jib boom up/down and platform rotate left/right functions

Move the control handle up and the jib boom will raise. Move the control handle down and the jib boom will lower. Move the control handle to the left and the platform will rotate to the left. Move the control handle to the right and the platform will rotate to the right.

24 Axle extend/retract switch with indicator lights

Move the axle select switch to chose an axle setting. The indicator light will flash while the axles are extending and stay on when the axles are fully extended. The indicator light will flash while the axles are retracting and stay on when the axles are fully retracted.

25 Drive enable control with indicator light

Light on indicates that the primary boom has moved past either circle-end wheel and the drive function is turned off. To drive, move the drive enable switch or push the drive enable button and slowly move the drive/steer control handle off center.
Controls

26 Thumb rocker switch for primary boom extend/retract function

Push the top of the rocker switch and primary boom will retract. Push the bottom of the rocker switch and the primary boom will extend.

27 Dual axis proportional control handle for primary boom up/down and turntable rotate left/right functions

Move the control handle up and the primary boom will raise. Move the control handle down and the primary boom will lower. Move the control handle to the left and the turntable will rotate to the left. Move the control handle to the right and the turntable will rotate to the right.

28 Platform level switch

Move the switch up and the level of the platform will raise. Move the switch down and the level of the platform will lower.

29 Not used

30 Axle extend button with indicator light

Push the axle extend button to extend the axles. The indicator light will flash while the axles are extending and stay on when the axles are fully extended.

31 Axle retract button with indicator light

Push the axle retract button to retract the axles. The indicator light will flash while the axles are retracting and stay on when the axles are fully retracted.
Do Not Operate Unless:

☑ You learn and practice the principles of safe machine operation contained in this operator's manual.

1 Avoid hazardous situations.

2 Always perform a pre-operation inspection.

Know and understand the pre-operation inspection before going on to the next section.

3 Always perform function tests prior to use.

4 Inspect the workplace.

5 Only use the machine as it was intended.

Pre-operation Inspection Fundamentals

It is the responsibility of the operator to perform a pre-operation inspection and routine maintenance.

The pre-operation inspection is a visual inspection performed by the operator prior to each work shift. The inspection is designed to discover if anything is apparently wrong with a machine before the operator performs the function tests.

The pre-operation inspection also serves to determine if routine maintenance procedures are required. Only routine maintenance items specified in this manual may be performed by the operator.

Refer to the list on the next page and check each of the items.

If damage or any unauthorized variation from factory delivered condition is discovered, the machine must be tagged and removed from service.

Repairs to the machine may only be made by a qualified service technician, according to the manufacturer's specifications. After repairs are completed, the operator must perform a pre-operation inspection again before going on to the function tests.

Scheduled maintenance inspections shall be performed by qualified service technicians, according to the manufacturer's specifications and the requirements listed in the responsibilities manual.
Inspections

Pre-operation Inspection

- Be sure that the operator’s, safety and responsibilities manuals are complete, legible and in the storage container located in the platform.
- Be sure that all decals are legible and in place. See Inspections for Decals section.
- Check for engine oil leaks and proper oil level. Add oil if needed. See Maintenance section.
- Check for hydraulic oil leaks and proper oil level. Add oil if needed. See Maintenance section.
- Check for engine coolant leaks and proper level of coolant. Add coolant if needed. See Maintenance section.
- Check for battery fluid leaks and proper fluid level. Add distilled water if needed. See Maintenance section.

Check the following components or areas for damage, improperly installed or missing parts and unauthorized modifications:

- Electrical components, wiring and electrical cables
- Hydraulic hoses, fittings, cylinders and manifolds
- Fuel and hydraulic tanks
- Drive and turntable motors and drive hubs
- Boom wear pads
- Tires and wheels
- Engine and related components
- Limit switches and horn
- Rotation sensors
- Steer and axle sensors
- Alarms and beacons (if equipped)
- Nuts, bolts and other fasteners
- Platform entry mid-rail or gate

Check entire machine for:

- Cracks in welds or structural components
- Dents or damage to machine
- Excessive rust, corrosion or oxidation
- Be sure that all structural and other critical components are present and all associated fasteners and pins are in place and properly tightened.
- After you complete your inspection, be sure that all compartment covers are in place and latched.
Function Test Fundamentals

The function tests are designed to discover any malfunctions before the machine is put into service. The operator must follow the step-by-step instructions to test all machine functions.

A malfunctioning machine must never be used. If malfunctions are discovered, the machine must be tagged and removed from service. Repairs to the machine may only be made by a qualified service technician, according to the manufacturer's specifications.

After repairs are completed, the operator must perform a pre-operation inspection and function tests again before putting the machine into service.

Do Not Operate Unless:

☑ You learn and practice the principles of safe machine operation contained in this operator’s manual.

1 Avoid hazardous situations.
2 Always perform a pre-operation inspection.
3 Always perform function tests prior to use.

Know and understand the function tests before going on to the next section.
4 Inspect the workplace.
5 Only use the machine as it was intended.

Inspections

1 Select a test area that is firm, level and free of obstruction.

At the Ground Controls

2 Turn the key switch to ground control.
3 Pull out the red Emergency Stop button to the on position.

☐ Result: The LCD screen will come on and display no error messages. The beacon (if equipped) should flash.

Note: In cold climates, the LCD readout screen will need to warm up before the display appears.

4 Start the engine. See Operating Instructions section.

Test Emergency Stop

5 Push in the red Emergency Stop button to the off position.

☐ Result: The engine should turn off and no functions should operate.

6 Pull out the red Emergency Stop button to the on position and restart the engine.

Test the Extendable Axles

Note: Start this test with the axles retracted.

7 At the ground controls, push and hold a function enable/speed select button and push the primary boom up button.

☐ Result: The primary boom should not raise. On the LCD screen, the arrow next to the extend axle symbol will flash. The boom should not raise unless the axles are extended.
Inspections

8 Push and hold a function enable/speed select button and press the secondary boom raise/extend button.

Result: The secondary boom should not raise. On the LCD screen, the arrow next to the extend axle symbol will flash. The secondary boom should not raise unless the axles are extended.

9 Push and hold a function enable/speed select button and press the primary boom extend button.

Result: The primary boom should not extend. On the LCD screen, the arrow next to the extend axle symbol will flash. The primary boom should not extend unless the axles are extended.

10 Push and hold a function enable/speed select button and push the turntable rotate left button.

Result: The turntable should return to center, rotate 15° to the right and then stop. The turntable should not rotate more than 15° unless the axles are extended.

11 Push and hold a function enable/speed select button and push the turntable rotate right button.

Result: The turntable should rotate 15° and then stop. The turntable should not rotate more than 15° unless the axles are extended.

12 Turn the key switch to platform control. At the platform controls, press and hold the foot switch and move the drive control handle in the forward direction.

13 Activate the extend axle function.

Result: The machine should drive and the axles should extend. The indicator light will flash while the axles are moving and stay on when the axles are fully extended.

14 Return to the ground controls. Turn the key switch to ground control.

15 Push and hold a function enable/speed select button and push the primary boom up button and then the primary boom down button.

Result: The primary boom should raise and lower normally.

16 Push and hold a function enable/speed select button and push the secondary boom raise/extend button and then the secondary boom lower/retract button.

Result: The secondary boom should raise and extend and retract and lower normally.

17 Push and hold a function enable/speed select button and push the primary boom extend button and then the primary boom retract button.

Result: The primary boom should extend and retract normally.

18 Push and hold a function enable/speed select button and push the turntable rotate left button and then the turntable rotate right button.

Result: The turntable should rotate normally.
Inspections

Test the Machine Functions

19 Do not press and hold a function enable/speed select button. Attempt to activate each boom and platform function button.

☐ Result: No boom and platform functions should operate.

20 Press and hold a function enable/speed select button and activate each boom and platform function button.

☐ Result: All boom and platform functions should operate through a full cycle. The descent alarm (if equipped) should sound while the boom is lowering.

Test Emergency/Auxiliary Controls

21 Push in the red Emergency Stop button to the off position to turn off the engine.

22 Pull out the red Emergency Stop button to the on position.

23 Simultaneously push and hold the emergency/auxiliary power button and push each boom function button.

Note: To conserve battery power, test each function through a partial cycle.

☐ Result: All boom functions should operate.

24 Start the engine.

Test the Tilt Sensor

25 Push one of the LCD screen control buttons until TURNTABLE LEVEL SENSOR X-DIRECTION appears.

☐ Result: The LCD screen should display the angle in degrees.

26 Push one of the LCD screen control buttons until TURNTABLE LEVEL SENSOR Y-DIRECTION appears.

☐ Result: The LCD screen should display the angle in degrees.

27 Push one of the LCD screen control buttons until PLATFORM LEVEL SENSOR DEGREES appears.

☐ Result: The LCD screen should display the angle in degrees.
Inspections

Test the Operating Envelope

28 Push one of the LCD screen control buttons shown until PRI BOOM ANGLE TO GRAVITY is displayed.

29 Raise the primary boom and observe the LCD screen.

Ø Result: The primary boom should raise and the LCD screen should display the primary boom angle in degrees.

30 Lower the primary boom.

31 Simultaneously push the 2 LCD screen control buttons shown to activate status mode.

32 Push one of the LCD screen control buttons shown until SEC BOOM ANGLE is displayed.

33 Push and hold the secondary boom up/extend button.

Ø Result: The secondary boom should raise and the LCD screen should display the secondary boom angle in degrees.

The secondary boom should raise and then extend. The secondary boom should not extend until it is fully raised.

34 Push and hold the secondary boom down/retract button.

Ø Result: The secondary boom should fully retract and then lower. The secondary boom should not lower unless it is fully retracted.

At the Platform Controls

Test Emergency Stop

35 Turn the key switch to platform control.

36 Push in the platform red Emergency Stop button to the off position.

Ø Result: The engine should turn off and no functions should operate.

37 Pull out the red Emergency Stop button and restart the engine.

Test the Horn

38 Push the horn button.

Ø Result: The horn should sound.

Test the Tilt Sensor Alarm

39 Push a button or move a switch, such as the engine idle control.

Ø Result: The alarm should sound at the platform controls.
Inspections

**Test the Foot Switch**

40 Push in the platform red Emergency Stop button to the off position.

41 Pull out the red Emergency Stop button to the on position but do not start the engine.

42 Press down the foot switch and attempt to start the engine.

☐ Result: The engine should not start.

43 Do not press down the foot switch and restart the engine.

44 Do not press down the foot switch and test each machine function.

☐ Result: No machine functions should operate.

**Test Machine Functions**

45 Press down the foot switch.

46 Activate each machine function control handle, toggle switch or button.

☐ Result: All functions should operate through a full cycle.

**Test the Steering**

47 Select square-end (blue arrow) steer. Push the square-end (blue arrow) steer button or move the steer mode switch.

48 Press down the foot switch.

49 Slowly move the drive/steer control handle in the direction indicated by the blue triangle on the control panel OR press the thumb rocker switch in the direction indicated by the blue triangle.

☐ Result: The square-end wheels should turn in the direction that the blue triangles point on the drive chassis.

50 Slowly move the drive/steer control handle in the direction indicated by the yellow triangle on the control panel OR press the thumb rocker switch in the direction indicated by the yellow triangle.

☐ Result: The square-end wheels should turn in the direction that the yellow triangles point on the drive chassis.

51 Select circle-end (yellow arrow) steer. Push the circle-end (yellow arrow) steer button or move the steer mode switch.

52 Press down the foot switch.

53 Slowly move the drive/steer control handle in the direction indicated by the yellow triangle on the control panel OR press the thumb rocker switch in the direction indicated by the yellow triangle.

☐ Result: The circle-end wheels should turn in the direction that the blue triangles point on the drive chassis.
Inspections

54 Slowly move the drive/steer control handle in the direction indicated by the blue triangle on the control panel OR press the thumb rocker switch in the direction indicated by the blue triangle.

☐ Result: The circle-end wheels should turn in the direction that the yellow triangles point on the drive chassis.

55 Select crab steer. Push the crab steer button or move the steer mode switch.

56 Press down the foot switch.

57 Slowly move the drive/steer control handle in the direction indicated by the blue triangle on the control panel OR press the thumb rocker switch in the direction indicated by the blue triangle.

☐ Result: All wheels should turn in the direction that the blue triangles point on the drive chassis.

58 Slowly move the drive/steer control handle in the direction indicated by the yellow triangle on the control panel OR press the thumb rocker switch in the direction indicated by the yellow triangle.

☐ Result: All wheels should turn in the direction that the yellow triangles point on the drive chassis.

59 Select coordinated steer. Push the coordinated steer button or move the steer mode switch.

60 Press down the foot switch.

61 Slowly move the drive/steer control handle in the direction indicated by the blue triangle on the control panel OR press the thumb rocker switch in the direction indicated by the blue triangle.

☐ Result: The square-end wheels should turn in the direction that the blue triangles point on the drive chassis. The circle-end wheels should turn in the direction that the yellow triangles point on the drive chassis.

62 Slowly move the drive/steer control handle in the direction indicated by the yellow triangle on the control panel OR press the thumb rocker switch in the direction indicated by the yellow triangle.

☐ Result: The square-end wheels should turn in the direction that the yellow triangles point on the drive chassis. The circle-end wheels should turn in the direction that the blue triangles point on the drive chassis.
Test Drive and Braking

63 Press down the foot switch.
64 Slowly move the drive/steer control handle in the direction indicated by the blue arrow on the control panel until the machine begins to move, then return the handle to the center position.

○ Result: The machine should move in the direction that the blue arrow points on the drive chassis, then come to an abrupt stop.

65 Slowly move the drive/steer control handle in the direction indicated by the yellow arrow on the control panel until the machine begins to move, then return the handle to the center position.

○ Result: The machine should move in the direction that the yellow arrow points on the drive chassis, then come to an abrupt stop.

Note: The brakes must be able to hold the machine on any slope it is able to climb.

Test the Drive Enable System

66 Press down the foot switch and lower the booms to the stowed position.
67 Rotate the turntable until the primary boom moves past one of the circle-end tires.

○ Result: The drive enable indicator light should come on while the boom is anywhere in the range shown.

68 Move the drive/steer control handle off center.

○ Result: No drive function should operate.
69 Push the drive enable button or move the drive enable switch, and slowly move the drive/steer control handle off center.

○ Result: The drive function should operate.

Note: When the drive enable system is in use, the machine may drive in the opposite direction that the drive and steer control handle is moved.

Use the color-coded direction arrows on the platform controls and the drive chassis to identify the direction of travel.

If the drive/steer control handle is not moved within two seconds of pushing the drive enable button, the drive function will not operate.

Test Limited Drive Speed

70 Press down the foot switch.
71 Raise the primary boom to 5° above horizontal.
72 Slowly move the drive control handle to the full drive position.

○ Result: The maximum achievable drive speed with the primary boom raised should not exceed 1 foot / 30 cm per second.

Note: The machine will travel 40 feet / 12 m in 40 seconds.

73 Lower the primary boom to the stowed position.
74 Extend the primary boom 4 feet / 1.2 m.
75 Slowly move the drive control handle to the full drive position.

○ Result: The maximum achievable drive speed with the primary boom extended should not exceed 1 foot / 30 cm per second.

Note: The machine will travel 40 feet / 12 m in 40 seconds.
Inspections

76 Retract the primary boom to the stowed position.

77 Raise the secondary boom to 5° above horizontal.

78 Slowly move the drive control handle to the full drive position.

杪 Result: The maximum achievable drive speed with the secondary boom raised should not exceed 1 foot / 30 cm per second.

Note: The machine will travel 40 feet / 12 m in 40 seconds.

79 Lower the secondary boom to the stowed position.

80 Extend the jib boom 1 foot / 30 cm.

81 Slowly move the drive control handle to the full drive position.

杪 Result: The maximum achievable drive speed with the jib boom extended should not exceed 1 foot / 30 cm per second.

If the drive speed with the primary or secondary boom raised or extended or the jib boom extended exceeds 1 foot / 30 cm per second, immediately tag and remove the machine from service.

82 Extend the primary boom 4 feet / 1.2 m.

83 Slowly move the drive control handle to the full drive position.

杪 Result: The maximum achievable drive speed with the jib boom extended and the primary boom extended should not exceed 6 inches / 15 cm per second.

If the drive speed with the jib boom extended and the primary boom extended exceeds 6 inches / 15 cm per second, immediately tag and remove the machine from service.

84 Retract the primary boom and the jib boom.

Test Emergency/Auxiliary Controls

85 Push in the red Emergency Stop button to the off position to shut off the engine.

86 Pull out the red Emergency Stop button to the on position.

87 Press down the foot switch.

88 Activate the emergency/auxiliary controls. Move and hold the switch or push and hold the button. Activate each function control handle, switch or button.

Note: To conserve battery power, test each function through a partial cycle.

杪 Result: All boom and steer functions should operate.

Test Aircraft Protection Package (if equipped)

89 Move the gray bumper at the bottom of the platform 4 inches / 10 cm in any direction.

90 Activate each function control handle or toggle switch or button.

杪 Result: All boom and steer functions should not operate.

91 Activate the function override. Move and hold the switch or push and hold the button.

92 Activate each function control handle or toggle switch or button.

杪 Result: All boom and steer functions should operate.
Do Not Operate Unless:

- You learn and practice the principles of safe machine operation contained in this operator's manual.
  1. Avoid hazardous situations.
  2. Always perform a pre-operation inspection.
  3. Always perform function tests prior to use.
  4. Inspect the workplace.
  5. Only use the machine as it was intended.

Fundamentals

The workplace inspection helps the operator determine if the workplace is suitable for safe machine operation. It should be performed by the operator prior to moving the machine to the workplace.

It is the operator's responsibility to read and remember the workplace hazards, then watch for and avoid them while moving, setting up and operating the machine.
Inspections

Inspection for Decals with Words

Determine whether the decals on your machine have words or symbols. Use the appropriate inspection to verify that all decals are legible and in place.

Shading indicates decal is hidden from view, i.e. under covers.
Inspections
Operating Instructions

Fundamentals
The Operating Instructions section provides instructions for each aspect of machine operation. It is the operator's responsibility to follow all the safety rules and instructions in the operator's, safety and responsibilities manuals.

Using the machine for anything other than lifting personnel, along with their tools and materials, to an aerial work site is unsafe and dangerous.

Only trained and authorized personnel should be permitted to operate a machine. If more than one operator is expected to use a machine at different times in the same work shift, they must all be qualified operators and are all expected to follow all safety rules and instructions in the operator's, safety and responsibilities manuals. That means every new operator should perform a pre-operation inspection, function tests, and a workplace inspection before using the machine.

Do Not Operate Unless:

☑️ You learn and practice the principles of safe machine operation contained in this operator's manual.

1 Avoid hazardous situations.
2 Always perform a pre-operation inspection.
3 Always perform function tests prior to use.
4 Inspect the workplace.
5 Only use the machine as it was intended.
Starting the Engine

1. At the ground controls, turn the key switch to the desired position.

Deutz models

2. Activate the glow plugs. Push the button or move the switch. The glow plugs will turn on for 30 seconds.

3. Start the engine. Press the button or move the switch.

The engine start button can be pressed at any time while the glow plugs are on.

Perkins and Cummins models

2. Activate the glow plugs for 3-5 seconds. Push and hold the button or move and hold the switch.

3. Start the engine. Press the button or move and hold the switch.

If the engine fails to start or dies, the restart delay will disable the start switch for 3 seconds.

If the engine fails to start after 15 seconds of cranking, determine the cause and repair any malfunction. Wait 60 seconds before trying to start again.

In cold conditions, 20°F / -6°C and below, warm the engine for 5 minutes before operating to prevent hydraulic system damage.

In extreme cold conditions, 0°F / -18°C and below, machines should be equipped with optional cold start kits. Attempting to start the engine when temperatures are below 0°F / -18°C may require the use of a booster battery.

Operating Instructions

If the machine is stored for long periods of time in low temperatures (below 32°F / 0°C) with the secondary boom raised and extended, the engine may not start due to a system fault.

To remove the fault, use the emergency controls and raise the secondary boom up until the secondary boom begins extending.

Emergency Stop

Push in either the ground or platform red Emergency Stop button to the off position to stop all functions and turn the engine off.

Repair any function that operates when the red Emergency Stop button is pushed in to the off position.

Selecting and operating the ground controls will override the platform red Emergency Stop button.

Emergency/Auxiliary Power

Use emergency/auxiliary power if the primary power source (engine) fails.

1. Turn the key switch to ground or platform control.

2. Pull out the red Emergency Stop button to the on position.

3. Press down the foot switch when operating the emergency/auxiliary controls from the platform.

4. Move and hold the switch or push and hold the button. Activate the desired function. The indicator light will be on when emergency power is being used.
Operating Instructions

To Extend and Retract Axles
1  Turn the key switch to platform control.
2  At the platform controls, press down the foot switch and move the drive control handle in either direction. Activate the extend axle function or the retract axle function. Move the switch or push the button.

The indicator light will flash while the axles are moving and stay on when the axles are fully extended or retracted.

The axles can only be retracted if the primary and secondary booms are fully lowered and retracted and the platform is between the circle-end wheels.

To Position Platform
1  Push and hold a function enable/speed select button.

2  Push the appropriate function button according to the markings on the control panel.

Drive, steer and axle functions are not available from the ground controls.

Operation from Ground
1  Turn the key switch to ground control.
2  Pull out the red Emergency Stop button to the on position.
3  Start the engine.

To Extend and Retract Axles
1  Turn the key switch to platform control.
2  At the platform controls, press down the foot switch and move the drive control handle in either direction. Activate the extend axle function or the retract axle function. Move the switch or push the button.

The indicator light will flash while the axles are moving and stay on when the axles are fully extended or retracted.

The axles can only be retracted if the primary and secondary booms are fully lowered and retracted and the platform is between the circle-end wheels.

To Position Platform
1  Push and hold a function enable/speed select button.

2  Push the appropriate function button according to the markings on the control panel.

Drive, steer and axle functions are not available from the ground controls.

Operation from Platform
1  Turn the key switch to platform control.
2  Pull out both ground and platform red Emergency Stop buttons to the on position.
3  Start the engine. Do not press down the foot switch when starting the engine.

To Position Platform
1  Press down the foot switch.
2  Slowly move the appropriate function control
Operating Instructions

handle or toggle switch or press the appropriate button according to the markings on the control panel.

To Steer

1 Press down the foot switch.

2 Select the steer mode. Move the switch or push the button. The indicator light next to the current steer mode will be on.

3 Slowly move the drive/steer control handle in the direction indicated by the blue or yellow triangles OR press the thumb rocker switch located on top of the drive control handle.

Use the color-coded direction arrows on the platform controls and the drive chassis to identify the direction the machine will travel.

Machine travel speed is restricted when the boom is raised or extended.

Driving on a slope

Determine the uphill, downhill and side slope ratings for the machine and determine the slope grade.

Maximum slope rating, counterweight uphill (gradeability): 45% (24°)

Maximum slope rating, counterweight downhill:
30% (17°)

Maximum side slope rating:
25% (14°)

Note: Slope rating is subject to ground conditions and adequate traction. The term gradeability applies to the counterweight uphill configuration only.

Be sure the boom is below horizontal and the platform is between the circle-end wheels.

Select the machine on incline drive setting.
Operating Instructions

To determine the slope grade:

Measure the slope with a digital inclinometer OR use the following procedure.

You will need:
- carpenter’s level
- straight piece of wood, at least 3 feet / 1 m long
- tape measure

Lay the piece of wood on the slope.

At the downhill end, lay the level on the top edge of the piece of wood and lift the end until the piece of wood is level.

While holding the piece of wood level, measure the vertical distance from the bottom of the piece of wood to the ground.

Divide the tape measure distance (rise) by the length of the piece of wood (run) and multiply by 100.

Example:

Piece of wood = 144 inches (3.6 m)
Run = 144 inches (3.6 m)
Rise = 12 inches (0.3 m)

\[
\frac{12 \text{ in}}{144 \text{ in}} = 0.083 \times 100 = 8.3\% \text{ grade}
\]
\[
0.3 \text{ m} \div 3.6 \text{ m} = 0.083 \times 100 = 8.3\% \text{ grade}
\]

If the slope exceeds the maximum uphill, downhill or side slope rating, then the machine must be winched or transported up or down the slope. See the Transport and Lifting section.

Drive Enable

Light on indicates that the primary boom has moved past either circle-end wheel and the drive function is turned off.

To drive, activate the drive enable function and slowly move the drive/steer control handle off center. Push the drive enable button or move the drive enable switch.

If the drive/steer control handle is not moved within two seconds of activating the drive enable function, the drive function will not operate. Release and activate the drive enable function again.

Be aware that the machine may move in the opposite direction that the drive and steer controls are moved.

Always use the color-coded direction arrows on the platform controls and the drive chassis to identify the direction the machine will travel.

When the drive enable light is on, the axles cannot retract.
Operating Instructions

Engine Idle Select (rpm)
Select the engine idle (rpm) setting. Move the switch or push the button. The indicator light next to the current setting will be on.

- Rabbit and foot switch symbol: foot switch activated high idle
- Turtle symbol: low idle
- Rabbit symbol: high idle

Check Engine Light
Light on and engine stopped: Tag the machine and remove from service.
Light on and engine still running: Contact service personnel within 24 hours.

Operating Envelope Indicator Lights
The operating envelope indicator lights will come on to notify the operator that a function has been interrupted and/or an action is required by the operator.

- Lower/Retract Secondary Boom indicator light flashing: Lower/retract the secondary boom until the indicator light is off.
- Lower Primary Boom indicator light flashing: Lower the primary boom until the indicator light is off.
- Machine Not Level indicator light flashing: The tilt alarm will be sounding when this light is flashing. Move the machine to a firm, level surface.
- Platform Not Level indicator light flashing: The tilt alarm will be sounding when this light is flashing. The Platform Level toggle switch will only work in the direction that will level the platform. Level the platform until the indicator light is off.

Out of Operational Envelope Recovery
If all functions stop operating, you may have exceeded the operational envelope. A trained operator on the ground will need to lower the platform from the ground controls. Please see the Service Bypass / Recovery Key Switch section in the service manual.
Operating Instructions

Generator (if equipped)

To operate the generator, press the generator button or move the generator switch. The indicator light will come on and the engine will continue to run.

Plug power tools into the power to platform GFCI outlet.

To turn off the generator, push the generator button or move the switch. The indicator light will turn off.

Aircraft Protection Package (if equipped)

If the platform bumpers come in contact with aircraft components, the machine will shut down and no functions will operate.

Move the function override toggle switch to either side to operate the machine.

After Each Use

1. Select a safe parking location—firm level surface, clear of obstruction and traffic.
2. Retract and lower the boom to the stowed position.
3. Rotate the turntable so that the boom is between the circle-end wheels.
4. Turn the key switch to the off position and remove the key to secure from unauthorized use.
5. Chock the wheels.
**Pipe Cradle Instructions**

The pipe cradle assembly consists of 2 pipe cradles positioned at either side of the platform and mounted to the guardrails with U-bolts.

**Observe and Obey:**

- Pipe cradles must be installed on the inside of the platform.
- Pipe cradles must not obstruct the platform controls or the platform entrance.
- The bottom of the pipe cradle tube must rest on the platform floor.
- Be sure the platform is level before installing a pipe cradle.

**Pipe Cradle Installation**

1. Install a pipe cradle on each side of the platform. Refer to the illustration on the left. Make sure the bottom of the pipe cradle tube rests on the platform floor.
2. Install two U-bolts from the outside of the platform rails through each pipe cradle mount.
3. Secure each U-bolt with 2 washers and 2 nuts.

![Diagram of pipe cradle installation](image)

- **a**: strap
- **b**: U-bolts
- **c**: pipe cradle mount
- **d**: upper platform railing
- **e**: pipe cradle weldment
- **f**: middle platform railing
- **g**: flat washers
- **h**: \(3/8\)-inch nylock nuts
Operating Instructions

Pipe Cradle Operation

1. Be sure the pipe cradle assembly and installation instructions have been followed properly and that the pipe cradles are secured to the platform railings.

2. Place the load so that it rests in both pipe cradles. The length of the load should be parallel with the length of the platform.

3. Center the load in the pipe cradles.

4. Secure the load to each pipe cradle. Pass the nylon strap over the load. Depress the buckle and slide the strap through. Tighten the strap.

5. Gently push and pull on the load to make sure the pipe cradles and load are secure.

6. Keep the load secured when the machine is moving.

⚠ Tip-over hazard. The weight of the pipe cradle assembly and the load in the pipe cradles will reduce the rated platform capacity of the machine and must be factored into the total platform load.

⚠ Tip-over hazard. The weight of the pipe cradle assembly and the load in the pipe cradles may limit the maximum number of occupants in the platform.

<table>

</tr>
<tr>
<td>9.5 kg</td>
</tr>
</tbody>
</table>
Panel Cradle Assembly

1. Apply the warning decal to the front of each panel cradle (if needed).
2. Install rubber bumper 1 in the panel cradle base. See the illustration.
3. Secure the bumper with 2 high profile lock nuts and 2 washers.

Panel Cradle Installation

1. Insert the hook piece through the slots in the panel cradle base.
2. Hook the panel cradle to the bottom platform tube in the desired location.
3. Install rubber bumper 2 through the panel cradle base and the hook piece. See the illustration.
4. Secure with 2 low profile lock nuts.
5. If the panel cradle is installed at a platform floor support tube, insert the U-bolt through the floor, around the tube and into the panel cradle base.
7. If the panel cradle is not installed at a platform floor support tube, use the aluminum tube provided.
8. Place the tube between the panel cradle and the platform floor. Insert the U-bolt through the floor, around the tube and into the panel cradle base.
9. Repeat above for the second set of parts.

Installation of Padding

1. Install the 2 pieces of padding on the platform rails. Position the padding to protect the panels from contact with the platform rails.

Installation of Strap

1. Open the clamp and install it around a vertical platform rail tube.
2. Insert a bolt with a washer through one side of the clamp.
3. Install the strap assembly end plate onto the bolt.
4. Insert the bolt through the other side of the clamp.
5. Secure with a washer and a nut. Do not over-tighten. The strap assembly end plate should be able to slide on the platform rail.
Operating Instructions

Panel Cradle Operation

1. Secure both panel cradles to the platform.
2. Place the load so that it rests in both panel cradles.
3. Center the load on the platform.
4. Secure the load to the platform using the strap. Tighten the strap.
Transport and Lifting Instructions

- Be sure the turntable is secured with the turntable rotation lock before transporting. Be sure to unlock the turntable for operation.

- Do not drive the machine on a slope that exceeds the slope or side slope rating. See Driving on a Slope in the Operating Instructions section.

- If the slope of the transport vehicle bed exceeds the uphill or downhill maximum slope rating, the machine must be loaded and unloaded using a winch as described.

Free-wheel Configuration for Winching

Chock the wheels to prevent the machine from rolling.

Release the wheel brakes by turning over all four drive hub disconnect caps.

Be sure the winch line is properly secured to the drive chassis tie points and the path is clear of all obstructions.

Reverse the procedures described to re-engage the brakes.

Note: The pump free-wheel valve should always remain closed.

Observe and Obey:

- Genie provides this securement information as a recommendation. Drivers are solely responsible for making sure machines are properly secured and the correct trailer is selected pursuant to US Department of Transportation regulations, other localized regulations, and their company policy.

- Genie customers needing to containerize any lift or Genie product should source a qualified freight forwarder with expertise in preparing, loading and securing construction and lifting equipment for international shipment.

- Only qualified aerial lift operators should move the machine on or off the truck.

- The transport vehicle must be parked on a level surface.

- The transport vehicle must be secured to prevent rolling while the machine is being loaded.

- Be sure the vehicle capacity, loading surfaces and chains or straps are sufficient to withstand the machine weight. See the serial label for the machine weight.
Transport and Lifting Instructions

Securing to Truck or Trailer for Transit

Always use the turntable rotation lock pin each time the machine is transported.

Turn the key switch to the off position and remove the key before transporting.

Inspect the entire machine for loose or unsecured items.

Securing the Chassis

Use chains of ample load capacity.

Use a minimum of 6 chains.

Adjust the rigging to prevent damage to the chains.

Securing the Platform

Place a block under the platform rotator. Do not allow the block to contact the platform cylinder.

Secure the platform with a nylon strap placed through the lower platform support. Do not use excessive downward force when securing the boom section.

Truck Bed

Secondary boom width:
26 in 66 cm

Jib boom width:
16 in 41 cm

4 ft 4 in 1.31 m

10 ft 10 in 3.3 m

19 ft 2 in 5.84 m

25 ft 1 in 7.65 m

10 ft 3.07 m

42 ft 5 in 12.97 m

25 ft 1 in 7.65 m

14 ft 4.25 m
Observe and Obey:

☑ Only qualified riggers should rig and lift the machine.

☑ Be sure the crane capacity, loading surfaces and straps or lines are sufficient to withstand the machine weight. See the serial label for the machine weight.

Transport and Lifting Instructions

Lifting Instructions

Fully lower and retract the primary and secondary boom. Fully lower and retract the jib boom. Remove all loose items on the machine.

Determine the center of gravity of your machine using the picture on this page.

Attach the rigging only to the designated lifting points on the machine. There are four lifting points on the chassis.

Adjust the rigging to prevent damage to the machine and to keep the machine level.
Maintenance

Observe and Obey:

☑ Only routine maintenance items specified in this manual shall be performed by the operator.

☑ Scheduled maintenance inspections shall be completed by qualified service technicians, according to the manufacturer's specifications and the requirements specified in the responsibilities manual.

☑ Use only Genie approved replacement parts.

Maintenance Symbols Legend

The following symbols have been used in this manual to help communicate the intent of the instructions. When one or more of the symbols appear at the beginning of a maintenance procedure, it conveys the meaning below.

🔧 Indicates that tools will be required to perform this procedure.

🔧 Indicates that new parts will be required to perform this procedure.

🔧 Indicates that a cold engine is required before performing this procedure.

Check the Engine Oil Level

Maintaining the proper engine oil level is essential to good engine performance and service life. Operating the machine with an improper oil level can damage engine components.

Note: Check the oil level with the engine off.

1. Check the engine oil dipstick. Add oil as needed.

Perkins 1104C-44 and 804D-33T Engine

- Oil type: 15W-40
- Oil type - cold conditions, 1104C: 10W-30
- Oil type - cold conditions, 804D: 5W-40

Deutz BF4L2011 and TD2011L04i Engine

- Oil type: 15W-40
- Oil type - cold conditions: 5W-30

Cummins B4.5C80 and B3.3C80 Engine

- Oil type: 15W-40
- Oil type - cold conditions: 10W-30
Maintenance

Check the Hydraulic Oil Level

Maintaining the hydraulic oil at the proper level is essential to machine operation. Improper hydraulic oil levels can damage hydraulic components. Daily checks allow the inspector to identify changes in the oil level that might indicate the presence of hydraulic system problems.

1. Be sure that the engine is off and the boom is in the stowed position.

2. Visually inspect the sight gauge located on the side of the hydraulic oil tank.

Result: The hydraulic oil level should be between the two marks on the decal next to the sight gauge. Add oil as needed.

<table>
<thead>
<tr>
<th>Maximum oil level</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum oil level</td>
</tr>
</tbody>
</table>

Hydraulic oil specifications

| Hydraulic oil type | Chevron Rykon® Premium MV equivalent |

Check the Batteries

Proper battery condition is essential to good engine performance and operational safety. Improper fluid levels or damaged cables and connections can result in engine component damage and hazardous conditions.

⚠️ Electrocution hazard. Contact with hot or live circuits may result in death or serious injury. Remove all rings, watches and other jewelry.

⚠️ Bodily injury hazard. Batteries contain acid. Avoid spilling or contacting battery acid. Neutralize battery acid spills with baking soda and water.

1. Put on protective clothing and eye wear.

2. Be sure that the battery cable connections are tight and free of corrosion.

3. Be sure that the battery hold-down bar is in place and secure.

4. Remove the battery vent caps.

5. Check the battery acid level. If needed, replenish with distilled water to the bottom of the battery fill tube. Do not overfill.

6. Install the vent caps.

Note: Adding terminal protectors and a corrosion preventative sealant will help eliminate corrosion on the battery terminals and cables.
Maintenance

Check the Engine Coolant Level
- Liquid Cooled Models

Maintaining the engine coolant at the proper level is essential to engine service life. An improper coolant level will affect the engine’s cooling capability and damage engine components. Daily checks will allow the inspector to identify changes in coolant level that might indicate cooling system problems.

1. Check the fluid level in the coolant recovery tank. Add fluid as needed.

○ Result: The fluid level should be in the NORMAL range.

⚠️ Bodily injury hazard. Fluids in the radiator are under pressure and extremely hot. Use caution when removing cap and adding fluids.

Scheduled Maintenance
Maintenance performed quarterly, annually and every two years must be completed by a person trained and qualified to perform maintenance on this machine according to the procedures found in the service manual for this machine.

Machines that have been out of service for more than three months must receive the quarterly inspection before they are put back into service.
