### Directions for Commercial Use:

AgroBest 10-8-8 is intended for foliar use. Apply 1 quart to 3 gallons per acre with sufficient water for thorough coverage. For best results, spray in early morning or late afternoon. Exercise caution when deciding whether to apply when temperatures reach 90°F or above. Phytotoxicity of any foliar application increases with temperature. Seek advice of your Agro-K dealer prior to application if you have any questions regarding application in specific environmental conditions. Foliar fertilization is intended to supplement standard soil fertility programs and will not by itself provide all nutrients normally required by agricultural crops. If you have any questions regarding mixing or application rates contact your Agro-K dealer before using this product.

**Warning:** The application of fertilizing materials containing molybdenum (Mo) may result in forage crops containing levels of molybdenum (Mo) which are toxic to ruminant animals.

This product contains boron and should be used only in accordance with directions. Improper use may result in injury to crops. Avoid freezing.
