CROP	PEST	RATE OF APPLICATION
Potato	Harvest Aid for Potato Foliage and Weed Desiccation	AIM 2 fluid ounces/A (0.032 lbs ai/A) + Reglone 1-2 pt/A (0.25-0.50 lbs ai/A) + MSO at 1 qt/A or 1% v/v OR COC 1% v/v

DIRECTIONS FOR USE:

Apply as a broadcast spray at a minimum of 20 gallons/acre by ground or at 5-10 gallons/acre by air to provide thorough coverage of potato foliage. **Thorough coverage of potato and weed foliage is essential for desiccation.** Apply Aim EC foliar to potatoes in later stages of potato senescence for best results of desiccation of foliage and vines. If potato crop is in active vegetative growth stages when desiccation is initiated, sequential applications may be required within 7 to 10 days after initial application. Aim EC will also help desiccate late season susceptible broadleaf weeds to aid in tuber harvest. MSO adjuvants are preferred for best results.

Refer to the Aim EC section 3 label for additional use directions regarding potato harvest aid.

RESTRICTIONS:

A maximum of 0.18 lbs active ingredient per acre (11.6 fl oz) AIM and may be applied per crop season as a desiccant
A maximum of 0.125 lbs active ingredient per acre per season (64 oz) Reglone.

Do not apply when conditions favor drift or winds are above 10 mph
