GENERAL INFORMATION

BENVIREO® BOTANIC® 8-0-0 is designed to prevent or correct nitrogen deficiencies in a wide range of agronomic and ornamental plants. Its use is suggested as a supplement to a regular, balanced fertilizer program to enhance yields and improve quality.

BENVIREO BOTANIC 8-0-0 should be used as part of a comprehensive Total Nutrition System® for sustaining plant growth, development, yield and quality.

DIRECTIONS FOR USE

BENVIREO BOTANIC 8-0-0 can be used on a wide range of field, speciality, and horticulture crops. **BENVIREO BOTANIC 8-0-0** can also be applied to turf, ornamental and greenhouse plants.

BENVIREO BOTANIC 8-0-0 may be applied as a foliar spray by air, ground concentrate or dilute. Maintain agitation to provide uniform distribution within spray tank. Do not apply when plants are under excessive heat or moisture stress. Thorough and even spray coverage is essential for maximum nutrient uptake and crop safety. Always include a high quality wetting agent, such as SYL-COAT®, at recommended rates.

Information regarding the contents and levels of metals in this product is available on the Internet at <http://www.aapfco.org/metals.html>

BENVIREO BOTANIC 8-0-0 can be soil applied as a band, side-dress or injected through the irrigation system, sprinkler, drip or center pivot. Maintain agitation to provide uniform distribution within spray tank. Rates of application and timing of treatments should be based on crop nutrient demand, prevailing environmental conditions, plant tissue analysis data or other information that indicates a need for supplemental nitrogen.

Rates of 5-25 gal per acre are appropriate for most crops. However, optimum rate of application will vary based on a variety of factors including degree of need or deficiency, growth stage, yield potential, environment, existing soil fertility levels, etc., and can be higher to meet plant nutrition needs.

COMPATIBILITY

BENVIREO BOTANIC 8-0-0 is compatible with many co-applied nutrient sources as well as plant protection products. Always jar test new combinations for compatibility prior to field mixing.
