### CONTENT ANALYSIS

Active Ingredient: 95% potassium polyacrylate (2-propenoic acid, crosslinked potassium salt).

### CONTAINS NON-PLANT FOOD INGREDIENTS.

**CAUTION:** Powdered material may form explosive dust-air mixture. Use in well ventilated areas. This product is not regulated as a hazardous material at the federal or state level.

### GENERAL INFORMATION

BountiGel P is a chemically stable, not readily biodegradable under aerobic conditions, non-toxic superabsorbent polymer that is able to rapidly absorb and maintain water and make it accessible to seeds and plants at their root zone.

### STORAGE INSTRUCTIONS

BountiGel P can be stored under dry storage conditions, in original container.

### MIXING DIRECTIONS FOR LIQUID BountiGel SUSPENSION PREPARED FROM BountiGel P

Fill mixing tank with total volume of water to be applied at 75 Gal. per treated vegetable/fruit crops acre (700 L per treated hectare). Use pump or agitator to ensure water is moving rapidly. Slowly add BountiGel P to water in tank at a rate 8.8 lbs per 100 gallons (10 kgs per 1000 L), making sure powder is rapidly mixed into water. Once all the BountiGel P powder has been added to water continue to agitate the suspension until the product is evenly dispersed. Once liquid BountiGel suspension has been prepared it should be applied within the next 48 hours. Particle filters should be removed from application equipment prior to using liquid BountiGel suspension to prevent possible clogging.

### USE DIRECTIONS Liquid BountiGel P Agricultural Crops

BountiGel P can be tank mixed with fertilizers and can be applied pre-plant or as a sidedress application. Use in soils with low moisture holding capacity for optimal results.

**Seed Beds:** Apply BountiGel P suspension mixture water at a rate of 6.6 lbs. BountiGel P per treated acre, at seed depth in line with or below the seeds to enhance seed germination.

**Tomato Transplant beds:** BountiGel P suspension can be added directly to the tomato transplant water at a rate of 6.6 lbs. BountiGel P per treated acre. Apply the transplant water at a rate of 75 gallons per treated acre (700 liters per treated hectare) below the soil surface in proximity to the root zone.

**Plant Beds:** Apply liquid BountiGel P suspension below the soil surface in proximity to root zone at rate of 75 gallons per treated acre (700 L per treated hectare). This will provide an application rate of BountiGel P of 6.6 lbs. per treated acre (7.4 kg per treated hectare).

Prior to tank mixing use a standard jar test to verify compatibility. Also see BountiGel P User Guide or website at [www.moasisgel.com](http://www.moasisgel.com) for specific instructions.
