## When to Apply

---

Apply when ants are actively foraging [typically when soil temperatures are greater than 60 deg F (15 deg C)] or consult your state agricultural experiment station or state extension service for optimum timing of application. In cases where reinfestation occurs or when very large mounds remain active, retreatment may be desirable after 3-4 months. Apply after dew or rainfall has dried for maximum effectiveness. For best results, do not apply if rainfall is anticipated within 4-6 hours after application. Note: Allow 7-10 days after applying Clinch before using a contact insecticide. This allows worker ants time to distribute bait throughout the colony.

**Precautions and Restrictions:** 1) **DO NOT** harvest within 28 days of application. 2) **DO NOT** apply more than two applications per season. 3) This pesticide is toxic to fish and wildlife. Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. 4) The Restricted Entry Interval (REI) is 12 hours.
