GENERAL INFORMATION

Compac 400 is specially formulated for wheat, oats, barley, rye, and other small grains.

Compac 400 is a balanced liquid plant food containing the primary and secondary plant nutrients. The secondary plant nutrients are chelated with EDTA to provide rapid assimilation into the plant system.

Compac 400 liquid fertilizer was formulated to provide a fast method to boost plant growth during critical or high growth periods, to prevent damage due to weather, and to correct nutrient deficiencies.

Compac 400 is processed with agents aiding in spray tank wetting and dispersment, therefore it will disperse in water with minimum agitation.

DIRECTIONS FOR USE

SHAKE WELL BEFORE USING

KEEP OUT OF THE REACH OF CHILDREN

Mixing Sequence: 1. Water 2. Compac 400 3. Other products

Application Rate: Apply at the rate of 2 to 8 pints per acre to correct listed deficiencies.

Dilution Rate: When foliar spraying Compac 400, use 20 gallons of water per acre through conventional sprayers, or 5 - 10 gallons of water per acre through low volume equipment. If less water is used, foliage may burn. In absence of agitation do not exceed a dilution ratio of 1:3.

Soil application with Other Liquid Fertilizer: Compac 400 may be combined with other liquid fertilizer. Broadcast or row applications are acceptable, although greater efficiency may be expected from row application. Trace elements should be added to pre-plant fertilizer.

COMPATIBILITY

Do not mix with 2, 4-D amine products as compatibility problems may occur.

In all cases, before mixing a full batch, it is recommended that a jar test for compatibility be conducted.
