Apply AVAUNT® at 5.0 to 6.0 ounces per acre (0.09 - 0.11 lb a.i./acre) as a foliar spray using properly calibrated ground spray equipment.

Make the first application at initiation of egg hatch, small larvae or at first signs of infestation for each generation. Use the higher application rate for moderate to heavy insect pressure. Make application before pests reach damaging levels. Monitor fields and make an additional application if populations rebuild to potentially damaging levels. Apply in sufficient water to obtain thorough and uniform cover of foliage. Consult your state cooperative extension service, professional consultants or other qualified authorities to determine appropriate action threshold levels for this pest.
