#### DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

Always read this FIFRA 2(ee) bulletin and the entire label on the product container before using this product. Do not apply this product in any way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

This is a full-season program recommendation for potatoes providing soil-borne and foliar disease suppression/control plus nematode suppression (disease vector reduction) that complements or reduces fumigant applications.

Apply VERTISAN® (1 pint/acre) plus VYDATE® C-LV (2.1 pints/acre) as a tank-mixture in-furrow.

Follow during the rosette stage, approximately 30 to 45 days after planting, with an application of VYDATE® C-LV (2.1 pints/acre).

Make a final (or third) application at or before row closure with a tank-mixture of VERTISAN® (1 pint/acre) + VYDATE® C-LV (2.1 pints/acre).

\*VYDATE® C-LV is a restricted use pesticide

After row closure, continue with VYDATE® C-LV applications at 2.1 pints per acre on 2 week intervals, as needed, through balance of the season up to harvest. Last application (days to harvest) = 7 days.

**Read and follow all applicable directions, restrictions and precautions on the EPA-registered label for each product.**

**For all uses of VYDATE® C-LV on potatoes:** do not apply more than 2.4 gal (306 fluid oz) (9 lb ai) VYDATE® C-LV per acre per season. Do not make more than 8 applications of VYDATE® C-LV per crop. Last application (days to harvest) = 7 days.

**For all uses of VERTISAN® on potatoes:** make no more than 2 sequential applications of VERTISAN® before switching to a fungicide with a different mode of action. Do not exceed 72 fl oz/acre per year.

VERTISAN® and VYDATE® C-LV can be applied by ground, air or through chemigation application equipment. Use sufficient water to obtain thorough coverage of plants. For best results, apply post plant applications through chemigation.

#### **TANK MIXTURES**

Tank mixtures with other fungicides may be used to broaden spectrum and/or manage potential resistance. Use tank mixtures with effective fungicides from different target site of actions groups (VERTISAN® is in Group 7, carboxamide fungicides) that are registered for the same crop use. Apply at least the minimum labeled rate of each fungicide in the tank mix.

Read and follow all label instructions on timing, precautions and warnings for a companion product before using this tank mixture. Follow the most restrictive labeling.
