

RESTRICTED USE PESTICIDE

Due to Acute Toxicity And Toxicity to Birds and Mammals.

For retail sale to and use only by Certified Applicators or persons under their direct supervision and only for those uses covered by the Certified Applicator's certification.

2(ee) Recommendation

Use information in accordance with Section 2(ee) of FIFRA

DUPONT™ VYDATE® L INSECTICIDE/NEMATICIDE

EPA REG. NO. 352-372

FOR APPLICATION THROUGH DRIP IRRIGATION SYSTEMS TO PROVIDE SUPPRESSION OF ROOT KNOT AND STUBBY ROOT NEMATODES IN CELERY IN THE STATE OF CALIFORNIA

This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by EPA.

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in any way that will contact workers or other persons; either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe; consult the agency responsible for pesticide regulation. Always read this FIFRA 2(ee) bulletin and the entire label on the product container before using this product.

DuPont will not be responsible for losses or damages resulting from the use of this product in any manner not specifically instructed by DuPont. User assumes all risks associated with uses not specified by the label or DuPont 2(ee) instructions.

DuPont™ VYDATE® L is recommended for use in drip irrigation systems to provide suppression of root knot and stubby root nematodes on celery in the state of California.

HOW TO USE

Apply VYDATE® L through the drip irrigation system at the rate of 4 pints per acre¹ of plant bed. Begin applications after seeding or transplanting. Apply on 21 to 30 day intervals after the initial application.

Adjust the VYDATE® L injection solution to approximately pH 5. Inject VYDATE® L into the irrigation cycle at a time which will result in the maximum amount of VYDATE® L being deposited into the root zone. The timing for the injection of the VYDATE® L during the irrigation cycle will depend on the placement of the drip tape relative to the plant root zone. For example, if the tape is close to the root zone apply in last third of the irrigation cycle. If tape is between rows, apply during the last half of the irrigation cycle. Adjust the flow from the injection equipment to apply the VYDATE® L over a period of 30 minutes to one hour. For best results allow at least 24 hours between the VYDATE® L injection and the next irrigation cycle to avoid leaching VYDATE® L out of the root zone.

¹ VYDATE® L rates are listed as broadcast rates per acre. For drip irrigation rates of VYDATE® L to be applied per 1000 feet see the chart below based on bed spacing.

NOTE

Do not make more than 8 applications per season.

Do not apply more than 24 pints (3 gal.) of VYDATE® L per acre per season.

Do not apply within 21 days of harvest.

VYDATE® L should not be applied at the same time that a drip/irrigation line clean out product is being used as performance may be reduced.

Bed Spacing	Linear Ft. of Bed to Equal One Acre	VYDATE® L 2 pint / acre Rate / 1000 Row feet	VYDATE® L 4 pint / acre Rate / 1000 Row feet
36 inches	14,520 ft	2.2 fl.oz	4.4 fl oz
48 inches	10,890 ft	2.9 fl.oz	5.9 fl oz
60 inches	8,712 ft	3.7 fl.oz	7.4 fl oz
72 inches	7,260 ft	4.4 fl oz	8.8 fl.oz

Refer to the VYDATE® L package label for specific precautions regarding additional chemigation use and required safety devices. Refer to the VYDATE® L package label for registered crop use prior to application.
