Application Directions. Begin **Endura** applications prior to infection and continue on a 10-day to 21-day interval. Use the shorter interval when disease pressure is high.

Disease control from **Endura** depends on disease pressure and various cultural practices that influence rind maturation and disease susceptibility. Improved disease performance may result when **Endura** is used in a crop management program that minimizes rind overmaturity and rind damage.

For aerial application to citrus fruit trees, use no less than 10 gallons of spray solution per acre.

Restrictions and Limitations. **DO NOT** apply more than 27.2 ozs/A (1.20 lbs boscalid) per year. **DO NOT** make more than four (4) applications of **Endura** per year.

Resistance Management. To limit the potential for development of resistance, **DO NOT** make more than two (2) sequential applications of **Endura** before alternating to a labeled fungicide with a different mode of action.

Conditions of Sale and Warranty

The **Directions For Use** of this product reflect the opinion of experts based on field use and tests. The directions are believed to be reliable and must be followed carefully. However, it is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or use of the product in a manner inconsistent with its labeling, all of which are beyond the control of BASF CORPORATION ("BASF") or the Seller. To the extent consistent with applicable law, all such risks shall be assumed by the Buyer.
