

## FIFRA §2(ee) RECOMMENDATION

### For Reduced Spray Volume Dormant Season Application on Tree Fruit, Nut and Vine Crops

FIFRA Section 2 (ee) Recommendation for use in WASHINGTON

## Galigan® 2E

EPA Reg. No. 66222-28

**FIFRA Section 2 (ee) Recommendation:** This recommendation is made as permitted under FIFRA Section 2 (ee) and has not been submitted to or accepted by the U.S. Environmental Protection Agency.

#### DIRECTIONS FOR USE

- It is a violation of Federal law to use this product inconsistent with its labeling.
- This product bulletin must be in the possession of the user at the time of pesticide application.
- Read the "Limitation of Warranty and Liability" in the label booklet for Galigan® 2E before using.
- Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA registered label.

### Spray Volume for Dormant Applications on Tree Fruit, Nut and Vine Crops

Application Methods and Recommended Cultural Practices – Post emergence Weed Control: Apply the specified rate in a broadcast spray volume of 20 or more gallons of water per acre (a minimum of 10 gallons if applying Galigan 2E in a tank mix with glyphosate or other contact herbicides which specify 10 gallons). As Galigan 2E has contact activity, optimum post-emergence control will be achieved with uniform coverage of weed foliage. The spray volume should be increased under heavy weed pressure or when crop residue is present. Post-emergence applications of Galigan 2E are most effective when made to weeds at the seedling stage. Partial control of suppression may result when applications are made later than the 4-inch or 4 leaf stage. For maximum control, make post-emergence applications to seedling grasses not exceeding the 1-leaf stage. The addition of a non-ionic surfactant applied at 0.25% v/v (2 pints/100 gallons of spray solution) will enhance effectiveness in controlling emerged weeds.
