PRODUCT INFORMATION

Use a total of 10-15 gallons per season:

This product is designed to provide a safe, soluble and reliable form of calcium ion that may be metered into the irrigation water. The metering process can provide an ease of application of the desired calcium ion necessary to help to provide a cation balance in the soil solution. Unless a nutrient is soluble it maybe unavailable to the plant.

LIQUA-JIP may be used to increase the calcium ion in the soil solution. The subsequent addition of **Penmax**[®] penetrant may help excess salts be carried down through the soil profile.

CONTAINS ENHANCE THA[®]

Enhance Tha[®] is a concentrated Technical Humic Acid liquid which is compatible with most fertilizers and micronutrients to help produce nutrient healthier crops. Enhance Tha may aid in the uptake of micronutrients.

The main benefits of adding organic matter to the soil are: improved moisture holding capacity, aeration and water penetration. Improved soil blocks, increased negatively charged colloidal particles(humus) capable of holding and exchanging nutritive cations. Buffering effects are provided decreasing the tendency for an abrupt pH change in the soil when acid or alkaline substances are added. Micronutrients are made more available by the formation of metal ion complexes. Enhance Tha[®] may help increase the microbial base.

DIRECTIONS FOR USE
GENERAL AG RATES**

With increased calcium ion concentration in the soil solution, this nutrient is made more available for plant uptake.

A general use rate for **LIQUA - JIP** starts with the first irrigation at 5 gallons per acre. This application will last through 3 irrigations. Apply 5 gallons **LIQUA - JIP** per acre with each third irrigation until harvest.

A general use rate over the growing season is a total of 10-15 gallons **LIQUA - JIP** per acre.

LIQUA - JIP should be applied by injecting into the irrigation water. The rate of application should be slow and applied over the entire set. Liqua-Jip can be diluted with water to achieve this.

It is very important to add LIQUA - JIP during the entire irrigation set. LIQUA - JIP can be cut with water to create enough volume to treat the entire set.

LIQUA - JIP does best when **Penmax**[®] is added to the irrigation set. **Penmax**[®] can be added with **Liqua-Jip** or on the next irrigation.

GOLF COURSE

General Golf Course Rate - For injection:
55 gallons per 10 acres applied over a 30 day period.

Fairways - 5 -10 gallons per acre, use enough dilution for maximum coverage.

Greens -5 - 15 ozs. Per 1000 sq. ft., use enough dilution for maximum coverage.

Turf - For problem spots on turf areas, apply 1/2-1 gallon of **LIQUA - JIP** in 15-25 gallons of water to 1000 sq. ft. in 2 separate applications, 2 to 3 days apart. Irrigate in a.m. daily with minimum run off for 5 days or until soil moisture level has been replenished.
