

HUMA BURST® WS

70% STABLE

GUARANTEED ANALYSIS

Total Humic Acid (HA) and Fulvic Acid (FA) 70.00%

Derived from: Oxidized Leonardite

DIRECTIONS FOR USE

- Designed to be put into water solutions with any pH and applied to the soil.
- HUMA BURST® WS 70% STABLE adds naturally occurring materials containing humic acids to soil that may enhance plant micronutrient availability and uptake and should be applied when soil analysis identifies the need and proper rate of application for this product.
- Best results will be obtained when application is concentrated in the active root zone or when applied directly to the soil followed by a shallow cultivation.
- Can be applied in combination with compatible plant growth regulators, pesticides, or other fertilizer solutions.
- Apply HUMA BURST® WS 70% STABLE by broadcast spray whether through fertigation, drip or spray machine. HUMA BURST® WS 70% STABLE can be applied to all soil types for ornamentals, lawns, gardens and landscapes.
- Avoid spreading during high temperatures or in times of drought.
- Application timing, intervals and rates may vary according to individual crop requirement, stage of development, available nutrient levels in the soil, and overall nutritional status of the crop.
- Applications can be made as often as every 15 days as needed.
- Soil moisture is required for maximum bioactivity. If soil is dry, moisture should be provided by irrigation.
- Consult your local HUMA GRO® representative or other agricultural specialist for crop-specific recommendations.

This product is intended as a supplement to a regular fertilization program and will not, by itself, provide all the nutrients normally required by agricultural crops.

STORAGE AND DISPOSAL:

Keep product in original bag. Do not transfer into food or drink containers. Always dispose of bag in accordance with local, state and/or federal regulations.
