

**MYR CALCIUM** is a fluid fertilizer formulated with complexed Calcium for the treatment of Ca deficiencies and to provide nitrogen from protein hydrolysate derived amino acids and peptides for improved plant metabolism. This special composition makes Ca easily absorbed and used by the plant.

Before using we recommend jar testing to evaluate compatibility with other products.

### RECOMMENDATIONS

#### Field Crops and Vegetables:

Apply 16 to 32 fluid ounces per acre during periods of rapid growth and during environmental or nutritional stress. The application may be repeated as needed throughout the growing season.

#### Tree Crops:

Make an application of 32 to 64 fluid ounces per acre after the beginning of active shoot growth. The application may be repeated at 2 to 4 week intervals through the growing season.

Mid-and late-season sprays directed to cover the fruit may help to reduce the effect of calcium deficiency related problems.

**Grapes and Berries:** Make an application of 16 to 32 fluid ounces after active growth begins. The application may be repeated at intervals of one week or more through the vegetative growth.

### SHAKE WELL BEFORE USE

Use only in case of a recognized need. Do not exceed recommended dose. Do not apply undiluted.
