

# MAGNET-B Org™

## 1-7-5

**MAGNET-B Org™** is a nutritional complex containing Nitrogen, Phosphorus, Potassium, Calcium, and Boron.

**MAGNET-B Org™** is designed to increase flowering and fruit set.

### Guaranteed Analysis

Nitrogen (N).....	1%
1.0% Water Insoluble Organic Nitrogen	
Available Phosphate (P <sub>2</sub> O <sub>5</sub> ).....	7%
Soluble Potash (K <sub>2</sub> O).....	5%
Calcium (Ca) .....	6.00%
Boron (B) .....	1.00%

Derived From: Bone Meal, Potassium Chloride and Disodium Octaborate Tetrahydrate.

**CAUTION:** This product contains boron, which may be injurious to certain crops. Contact your local county agent or field consultant for specific information.

**SHAKE WELL BEFORE USE**

CROP TYPE	RATE	APPLICATION TIMING
<b>Vegetables, sugar cane, rice, citrus, cucurbits, tomatoes, and peppers.</b>	32-48 oz/ 100 gallons	Start applications at crop initiation and during growth period at 2 week intervals. Rates should be based on soil characteristics. Use highest rates in soils with higher salinity, poor drainage, low in organic matter and in highly compacted soils.
<b>Turf, golf courses, and ornamental crops.</b>		

#### Directions For Use

Use in accordance with recommendations of a qualified individual or institution, or according to an approved nutrient management plan.

#### SHAKE WELL BEFORE USE

Do not store at temperatures below 45°F.

Verify soil and water pH to make necessary adjustments prior to defining a fertilizer program. Conduct a soil analysis to define nutritional needs to supplement. It is necessary to perform a compatibility test if other products are to be tank mixed with Magnet-B Org. No claim of compatibility with other products is implied. Magnet-B Org can be applied through irrigation systems. The injection equipment used must be in compliance with federal, state and local regulations. It is recommended to use Magnet-B Org at the end of the irrigation cycle, ensuring that sufficient water run-off is allowed once the application is completed and prior to turn the system off. The buffering of tank water to pH 6-8 prior to the addition of Magnet-B Org is recommended. Add required amount of any dry flowable, wettable powder, flow-able, and solution tank mix partners to partially filled tank (1/2 total volume), agitate by mechanical or hydraulic means, add Magnet-B Org agitate again and then add remaining EC formulation if used, and required amount of water. Apply material with properly calibrated hand held, mechanical or motorized spray equipment. For hand held, mechanical, or motorized applications, use 1 quart of Magnet-B Org per acre as described below. Spray volume may vary and apply as a full coverage spray. The "Directions For Use" of this product reflects the cumulative inputs from both historical field use and product testing programs. However, it is impossible to test this product on all species and cultivars. A preliminary trial is suggested on a small scale before a full treatment is applied to any plant type not shown on this label but found in a similar use site. Wait 5-7 days after treatment to evaluate results.
