

GENERAL INFORMATION

Boron is an essential plant nutrient that aids in vigorous plant growth. Because boron is not mobile within the plant, a continuous supply to all growing points is required from germination to maturity. Conditions that contribute to boron deficiency by reducing boron availability of supply include:

☐ low organic matter soils(<2%)
☐ water stress or drought conditions
☐ crop removal
☐ soils pH 6.0 or higher

☐ leaching (especially with crops under frequent or continuous irrigation)
☐ high potassium soils or soils recently fertilized with high potassium
☐ recently lined soils

RECOMMENDED USES

FOR SOIL APPLICATION:
Apply the recommended amount with ground equipment or by air in a volume sufficient for thorough coverage. Do not apply over 2 quarts of Boron in any one spray application. If the crop requires more that 2 quarts per acre, split the application allowing 14 days between sprays.

FOR SOIL APPLICATION:
Boron must be applied uniformly across the field. Apply alone; as a tank mix with other agricultural chemical; or in liquid fertilizer. Always use sufficient agitation to insure thorough mixing.
