USE INFORMATION

Apply this product only as directed on this label. Do not use this product for any uses other than those specified on this label. This material may be applied with ground equipment or aircraft depending upon local conditions. Do not apply this product through any type of irrigation system.

Microfine Sulfur is formulated for use as a dust or for use in water as a spray on fruits, vegetables and field crops, flowers and ornamentals, and poultry for control of certain fungus, diseases, and Mites. It may be combined in the spray tank with most of the commonly used fungicides and insecticides.

DIRECTIONS FOR SPRAYING: Pour the specific amount of this product on the surface of water in the spray tank. Add balance of water to fill the tank. Keep agitator running during filling and spraying operations. Do not allow mixture to stand. Do not use in low volume gear-type spray equipment. Do not combine with emulsifiable liquids unless previous use of mixture has proven physically compatible and safe to plants.

DIRECTIONS FOR DUSTING: Avoid drift. Apply when air is calm. For best results, apply at night or in early morning hours. Repeat as needed.

PRECAUTION: Do not use sulfur in combination with oil or within 21 to 60 days of an oil spray. Do not use sulfur on apples or other sensitive crops when shade temperatures exceed, or are likely to exceed 90 °F. Do not apply or allow sulfur to drift to cucurbits (cucumber, cantaloupe, melon, squash) or tung. To do so may result in severe fruit and leaf injury. When growing crops for processing, consult the processor before applying sulfur.

APPLICATION DIRECTIONS

The specific recommendations on this label conform to the most common application rates and methods for the crop listed. Consult State Agricultural Station or State Agricultural Extension Service Specialist for additional information as the timing, application method, application rate and frequency will vary with local conditions.

All spray dosages given on this label are for dilute sprays (1x concentration). For use in concentrate sprays, increase the dosage of Microfine Sulfur to apply the equivalent amount per acre. For example, if normal use is 5.0 pounds per 100 gallons of water applied to 1 acre, the 5x concentrate rate will be 25.0 pounds per 100 gallons of water applied to 5 acres. When used as a dust, use the dosage rates listed omitting the water. Apply to coat the foliage and fruit with a light uniform residue. Apply often enough to keep new growth covered.

IMPORTANT: Use the higher dosage during periods of frequent and heavy rainfall. Spray often enough to keep susceptible growth covered. This may require weekly or bi-weekly applications during periods of rapid growth and frequent rainfall.

ADDITIONAL DIRECTIONS FOR USE FOR CALIFORNIA

In addition to specific instructions under directions for use on the main sulfur label, the following conditions must be followed for use in California.

1. The operator of the property and the applicator must establish a buffer zone of enough distance to prevent drift onto non-target areas such as hospitals, clinics, residential areas, schools, and any other area designated by the county agricultural commissioner.
2. The operator of the property and the applicator must evaluate the method and equipment for each site to ensure proper and safe use. Evaluations shall include, but not be limited to the appropriateness of ground or air application.
3. Sulfur shall not be added when the wind velocity exceeds 10 miles per hour. Applicators should be aware that in some areas of California, "dead calm" conditions are often associated with an inversion situation. In these areas, applying sulfur when there is minimum air movement of 2 miles per hour will help ensure that an inversion situation does not exist.
4. All applicators, prior to use of dust formulations, should read and understand the Best Application Practices Manual.
5. Before using this product, read and follow all applicable directions, restrictions and precautions on the EPA registered label.
