Milestone®

EPA Reg. No. 62719-519

EPA Section 24(c) Special Local Need Registration EPA SLN FL180001

For Distribution and Use Only Within the State of Florida.

For Control Or Suppression Of Broadleaf Weeds In Longleaf Pine Plantations

ATTENTION

- It is a violation of State and Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of pesticide application.
- Persons using this product must comply with all applicable directions, restrictions, and precautions found on this labeling and that of the label of the federally registered product upon which this amendment is based.
- Read this SLN labeling and the label affixed to the container for Milestone® before applying. Carefully follow all precautionary statements and applicable use directions.
- Use of Milestone according to this supplemental labeling is subject to all use precautions and limitations imposed by the label affixed to the container for Milestone.

Active Ingredient:

Triisopropanolammonium salt of 2-pyridine carboxylic acid, 4-amino-3,6-dichloro-	40.6%
Other Ingredients	59.4%
Total	100.0%

Directions for Use

Refer to Milestone product label for Use Precautions, Use Restrictions, Mixing Directions, and Application Directions.

For suppression or control of susceptible broadleaf weeds and vines in longleaf pine plantations, apply up to 7 fl oz of Milestone per acre. Applications may be applied as an over-the-top treatment to longleaf pine as early as two months after planting; however, do not use any surfactant with these applications. Some minor transient (temporary) injury may occur from use of Milestone when applied over-the-top of longleaf pines beyond the grass stage of growth (terminal bud growth and elongation) but has not shown to impede tree growth or development.

Satisfactory results have been observed on crop trees with a wide range of tree heights. For best results, wait at least two months post planting before making applications of Milestone to newly planted longleaf pine trees. Applications can be made during periods of active tree growth and bud elongation including after the longleaf pine have emerged from the grass stage of growth.

Application methods may include broadcast, banded, or directed spot treatments. Do not exceed the maximum use rate of 7 fl oz of Milestone per acre. When making directed spot treatments, it is recommended to avoid overspray directly onto actively growing terminal buds. Applications should be made when target weeds are actively growing with healthy and abundant foliage.

To broaden the spectrum of weeds and vines controlled, apply up to 7 fl oz of Milestone per acre in tank mix combination with other commercially available herbicides labeled for similar use within longleaf pine stands.

Application Notes: For best control from broadcast and directed spray applications of Milestone, use a spray volume that will provide thorough plant coverage. Recommended spray volumes are usually 15 to 25 gallons per acre.
