MILLER FOAM FIGHTER TECHNICAL BULLETIN

Miller Foam Fighter is recommended to be used AS NEEDED to knock down visible spray tank foam generation or inhibit foam generation when initially added to spray tanks with water.

Foam Fighter utilizes a simple flip top squirt cap. Product use recommendation is one to three squirts AS NEEDED per spray tank.

Lab results indicate that an average measurable quantity of 1 – 3 squirts would equate to 1/3 oz to 1 oz.

Certain pesticide chemistries that cause excessive foam generation would normally require the higher rate.
