

GROW  MORE®

N-90 Spreader/Activator

N-90 is a water soluble product providing an easily diluted surface active agent. It is for use with herbicides to increase surface wettability, spreadability and contact activity.

SUGGESTIONS FOR USE

Usage of N-90 will vary with different sprays and with methods of application and water hardness conditions. Use only minimum amount necessary to achieve a smooth uniform film.

A) DILUTE FULL VOLUME SPRAYS:

Herbicides: Use between 1/2 pint to 8 pints N-90 per 100 gallons of final spray mixture. For small volume, use 1 to 7 teaspoons N-90 per gallon of final spray mixture.

B) CONCENTRATED SPRAYS:

As sprays are concentrated to 2x, 10x, etc., the amount of N-90 should be increased in about the same proportion as the pesticides.

C) AERIAL USE:

To improve pesticide coverage by air, use 1/2 to 2 pints N-90 in sufficient volume spray mix to cover. N-90 should be added to the spray tank last, with agitator running after all other ingredients are well-mixed.

N-90 Spray Adjuvant is compatible with nonselective herbicides where a spray adjuvant is recommended to be used with such materials.
