GENERAL INFORMATION

NUTRISYNC® SULFUR is a clear liquid solution containing 6.3% Sulfur. NUTRISYNC SULFUR is designed for foliar application to correct deficiencies and supplement high yield nutrient demand.

EQUIPMENT

Brass, copper and galvanized metals may be subject to mild corrosion from prolonged or repeated contact with this product.

COMPATIBILITY

NUTRISYNC SULFUR can be applied alone or with other compatible spray materials. Ammonium polyphosphate fertilizers tend to be more compatible than orthophosphate types. Including some polyphosphate in the mixture often improves compatibility of orthophosphates.

Proposed mixtures should be evaluated in a jar test before full scale use. Fertilizer based mixtures that also contain pesticides should be sprayed as soon as possible.

Note: When combining NUTRISYNC SULFUR with phosphate fertilizers vigorous agitation is required for good product mixing. See mixing directions below for more information.

CROP SAFETY

This product has been tested on a number of crop varieties with no phytotoxicity observed at labeled rates; however, this product has not been tested on all varieties and cultivars. Due to the large number of plant species and their associated varieties or cultivars, and due to variable growing conditions, it is impossible to test every plant for tolerance to this product. It is the responsibility of the user to determine if this product can be used safely prior to commercial use. In a small test area, test the specified rates on plants for phytotoxicity prior to general use. Before using any tank mix, test the combination on a small portion of the crop to be treated to ensure that a phytotoxic response will not occur as a result of application. Treat a small group of target crop including plant cultivars and evaluate for 3 to 7 days prior to making an application to your entire crop.

APPLICATION DIRECTIONS

For best results, foliar applications of NUTRISYNC SULFUR should be made when temperatures are below 90 °F and foliage is dry. Consult your state Agricultural Experiment Station, or Extension Agent for additional information on rates, timing of application and phytotoxic sensitivity of varieties or hybrids.

MIXING INSTRUCTIONS

1. Add NUTRISYNC SULFUR to water and start agitation.
2. Add pesticides or other nutrients.
3. Fill tank and agitate thoroughly.

RATES: DIRECTIONS FOR USE

Apply as needed based on soil or tissue analysis results, or according to recommendations in your nutrient management plan.

APPLICATION INFORMATION

NUTRISYNC SULFUR may be applied to a wide variety of agricultural, turf and ornamental crops. Sulfur requirement of most crops is greatest during early development and periods of fruit initiation. Applications of NUTRISYNC SULFUR should be made based on performance experience, or a tissue analysis indicating a need for Sulfur. Optimum uptake of NUTRISYNC SULFUR is achieved when tank-mix concentrations are in a range of 1 to 5 gallons per 100 gallons of carrier. Uses include but are not limited to the crop specific directions in the table below.
