

ORGANIC FORMATION

0.45-0.00-0.90

GUARANTEED ANALYSIS

TOTAL NITROGEN (N).....	0.45%
0.37% water soluble organic nitrogen	
0.08% water insoluble organic nitrogen	
SOLUBLE POTASH (K ₂ O).....	0.90%
Zinc (Zn)	0.11%
Derived from molasses, acidulated fish solubles, kelp extracts and zinc sulfate.	
Weight per gallon: 9.04 lbs. per gallon @ 68°F.	

GENERAL INFORMATION

For best results apply ORGANIC FORMATION in the root zone. ORGANIC FORMATION is compatible with most organic crop protection products and fertilizers. A jar test is recommended before mixing ORGANIC FORMATION with other products. ORGANIC FORMATION can be applied to all agricultural crops.

DIRECTIONS FOR USE

ORGANIC FORMATION can be applied to all agricultural crops, including, but not limited to cane and vine crops, citrus, nuts, stone and pome fruit, lettuce, strawberries, tomato, potato, sweet potato, carrot, onion and garlic.

ORGANIC FORMATION should be applied through the irrigation system. Flood, sprinkler, micro-sprinkler, drip and other irrigation systems may be used. To maximize nutrient distribution into the root zone inject ORGANIC FORMATION in the middle third of the irrigation cycle. If other products are also being applied, fully dissolve and mix them in the tank prior to adding ORGANIC FORMATION. This product is compatible with most chemicals and fertilizers. A jar test must be conducted before mixing with other fertilizers.

PREPLANT OR TRANSPLANT APPLICATIONS (Annual Crops)

Apply 4–6 gallons per acre as a “pop-up” or starter application in close proximity to the newly planted seed or transplant.

Pre-plant applications should be placed in the root zone. Transplant applications can be made in the transplant water or run through the irrigation system at the time of planting to get the product into the root zone.

ESTABLISHED CROPS

Apply the product through the irrigation system, or other suitable methods to get the product into the root zone. Application to the root zone provides the most beneficial results. Soil surface applications without water incorporation may result in reduced efficacy.

For annual crops apply 6–12 gallons approximately 2–4 weeks after emergence or transplant establishment and continue at 3–4 week intervals through flowering, fruit set and sizing period.

PERENNIAL CROPS

Soil Application (In season): Apply 10–24 gallons per acre at initial root flush periods. Subsequent applications should be made at monthly intervals. Apply 6–30 gallons per acre at key crop development stages over the growing season.

Soil Application (fall): Apply 10–24 gallons per acre in the fall through the irrigation system while the roots are still actively growing.
