GENERAL INFORMATION

PURIC™ ZINC PRIME MAX is designed for application to the soil. **PURIC ZINC PRIME MAX** is highly effective under adverse soil conditions unlike inorganic zinc compounds that are tied-up and unavailable to the plant. These adverse conditions include: high phosphate soil levels, high pH (alkaline), high salinity, high carbonate levels, and clay soils (adsorption). EDTA products may be applied separately or in combination with fertilizers or pesticides. **PURIC ZINC PRIME MAX** is recommended for soil application only.

DIRECTIONS FOR USE

SOIL APPLICATIONS FOR TREE FRUIT AND NUT CROPS: Apply 1-10 gallons per acre with pesticides, fertilizers, or irrigation water (emitters, drip or overhead). Correction may not be evident for several weeks. **PURIC ZINC PRIME MAX** is not intended to be applied to foliage as severe damage to plant may result.

Information regarding the contents and levels of metals in this product is available on the Internet at <http://www.aapfco.org/metals.htm>

APPLICATIONS FOR ROW, FIELD AND VEGETABLE CROPS: Applications of **PURIC ZINC PRIME MAX** are preferred at planting or shortly before emergence. Applications prior to bloom or pollination should be injected or applied to the soil. Split applications are preferred over a single application.

SOIL: Apply with pesticides, fertilizers or irrigation water (drip or emitter) at 1-8 gallons per acre. **PURIC ZINC PRIME MAX** may be applied preplant (as near as possible to planting), during planting (close to seed) or postemergence as a layby or shanked application.

COMPATIBILITY

Always jar test new combinations for compatibility prior to field mixing.
