### **DIRECTIONS FOR USE**

It is a violation of federal law to use this product in a manner inconsistent with its label. Always read this FIFRA 2(ee) bulletin and the entire label on the product container before using this product.

Bayer CropScience will not be responsible for losses or damages resulting from the use of these products in any manner not specifically instructed by Bayer CropScience. User assumes all risks associated with non-labeled use.

Bayer CropScience Pastora Herbicide at 1.0 to 1.5 ounces per acre may be used for suppression of KR bluestem. Applications made to weeds that are under environmental stress (such as drought) may result in unsatisfactory results.

A repeat application 4 to 8 weeks after the first application is the best approach for an improved level of suppression. Do not apply more than 2.5 ounces of Pastora Herbicide per acre per year.

The addition of a nonionic surfactant (NIS) at 0.25% v/v (1 quart per 100 gallons spray solution) or 0.5% under arid conditions, or crop oil concentrate (COC) at 1% v/v (1 gallon per 100 gallons spray solution) or 2% under arid conditions, to Pastora Herbicide is required.
