

PENMAX®

AGRICULTURAL SOIL PENETRANT

“Has No Equal”

Washes Away Unwanted Salts

Loosens The Soil

NONPLANT FOOD INGREDIENT

ACTIVE INGREDIENTS

25% poly(oxy-1,2-ethanediyl),
alpha-(4-nonylphenyl)-omega-hydroxy-, branched

KEEP OUT OF REACH OF CHILDREN

PRODUCT INFORMATION

PENMAX® is a very **pure**, very properly formulated material that will lower the surface tension of the water to allow more efficient **penetration** in the diverse soils of the area. The action of this product is to lower the surface tension of the water and allow the water to both **penetrate** the “hard to wet soils” and to act as a “**spreader**” to promote foliar absorption of nutrients.

The results of proper application of PENMAX® are:

In heavy soils such as expandable clay and adobes, the water will penetrate more readily. **Fertilizer** can be carried into the soils, along with the water, promoting deeper **root systems**. Excess **salts** will be carried away from the root zone as the water continues to penetrate. Because of less run off, erosion on slopes will be decreased. PENMAX® helps loosen **crusted soils**.

When using PENMAX® with fertilizers test compatibility by mixing, and agitate the material at the desired concentration level in a 1 pint clear plastic bottle. If no separation is observed, the mixture is compatible and can be mixed in the spray tank. If the ingredients do not mix (form a gel, settle out, or form a creamy layer) the materials are not compatible and should not be used together. PENMAX® is compatible with most materials.

SEED TREATMENT at planting time, mix 1 pint in 25 gallons of water. Soak bulbs 10 minutes before planting. When germinating seeds and bulbs, spray lightly over seeded area after planting. When treating potted plants, use one drop per cup of water and apply once a month with good drainage.

TRANSPLANT: Add PENMAX® at 1 qt per 500 gallons of transplant water.

WATER DISTRICT PERCOLATION PONDS:

Add 3 gallons Penmax® per acre foot of water. This rate may increase the percolation process. Apply Penmax® evenly over the surface area or treat the incoming water.

DIRECTIONS FOR USE

GENERAL AG RATES

In general PENMAX® will greatly increase water penetration, flush salts away from the root zone and reduce clodding and crusting.

A general use rate for PENMAX® starts with first irrigation at 1/2 gallon PENMAX® per acre. This application will last through 3 irrigation's. Apply 1/4 gallon PENMAX® per acre with each third irrigation until harvest.

A general use rate over the growing season is a total of 1 1/2 gallons Penmax® per acre.

On tree crops use PENMAX® at the rate of 1/2 gallon per acre.

PENMAX® should be applied by injecting into the irrigation water, and the rate of application should be low and applied over the entire set until 1/2 gallon has been applied per acre.

It is very important to treat all of the water during the entire irrigation set. Penmax® can be cut with water or fertilizer to create enough volume to treat the entire set.

General rates:

- For use with fertilizer solutions, add 1 pint per acre.

GOLF COURSE

GENERAL GOLF COURSE RATE-- For injection: 55 gallon per 80 acres applied over a 30 day period.

FAIRWAYS-- 1 quart - 1 gallon per acre, use enough dilution for maximum coverage.

GREENS-- 1 - 3 oz. per 1000 sq ft, use enough dilution for maximum coverage.

TURF-- For problem spots on turf areas, apply 2 - 4 oz. of the Penmax® in 15 - 25 gallons of water to 1000 sq. Ft. in 2 separate applications, 2 to 3 days apart. Irrigate in A.M. daily with minimum run off for 5 days or until soil moisture level has been replenished.

PENMAX® IS A REGISTERED TRADEMARK OF WESTERN NUTRIENTS CORPORATION.
