DIRECTIONS FOR USE

DO NOT spray in the heat of the day or when the plant is under moisture stress. DO NOT spray to the point of runoff. Use as fine of a spray mist as possible. Allow 3-4 hours after application before sprinkler irrigating to avoid washing the product off.

Recommended mixing sequence: Adjuvants, pesticides, FBSciences nutrient products, other fertilizers, balance of water. When mixing with calcium or micronutrient fertilizers, add a citric acid buffer until the pH is 4.5 to 5.0 to improve compatibility and uptake. Ensure agitation is available when mixing with calcium fertilizers. DO NOT mix with crop oil concentrates without first consulting your local agronomist. A standard jar test is recommended before tank mixing.

RATES & TIMING FOR ALL CROPS

Apply **2-5 quarts/acre** at any growth stage. When using spray volumes of 50 gallons per acre or greater, use the higher labeled spray rates. Repeat every two to four weeks during periods of high phosphorus demand by the crop.

WARNING: The application of fertilizer material containing molybdenum (Mo) may result in forage crops containing levels of molybdenum (Mo) which are toxic to ruminant animals.
