INTERA

Section 24(c) Special Local Need Label

FOR DISTRIBUTION AND USE ONLY WITHIN PUERTO RICO

Proclaim® Insecticide

EPA Reg. No. 100-904
EPA SLN No. PR-160002

For Control of Fall Army Worm Infesting Field Corn Grown for Seed Research Purposes Only

KEEP OUT OF REACH OF CHILDREN
CAUTION

**This label expires and must not be distributed or used in accordance with this Special Local
Need registration after April 11, 2025.**

DIRECTIONS FOR USE

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This label must be in the possession of the user at the time of application.
- Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA-registered label.

IMPORTANT

This label is only for use by authorized research facility personnel on field corn grown for seed research purposes and may not be copied or re-transmitted in any form. No portion of the crop treated with Proclaim Insecticide shall be used or distributed as food for human consumption or feed for animal consumption. All seeds derived from plants treated with Proclaim Insecticide must be labeled in a way to prevent entry into food or feed chains, such as "Do not use for food, feed, or oil purposes."

IMPORTANT

Syngenta has not investigated the use of Proclaim Insecticide for potential adverse interactions with any other crop protection or fertilizer products used in seed corn production, nor across potential experimental or commercial breeding lines. Therefore adverse effects arising from the use of Proclaim Insecticide on seed corn cannot be predicted and are therefore the responsibility of the User.

Field Corn Grown for Seed Research Purposes

Pest	Rate per Acre per Application	Instructions
Fall Armyworm	2.4 - 4.8. oz/A	<ul style="list-style-type: none">• Apply when larvae are first observed• Use 2.4 oz/A for low to moderate infestations and 4.8 oz/A for high infestations.• The use of a penetrating type spray adjuvant at the manufacturer's suggested rate, is recommended for all applications of Proclaim Insecticide. The use of an adjuvant typically improves coverage and penetration and results in optimum insect control, especially in crops with hard-to-wet leaf surfaces. However do not use sticker/binder type adjuvants because they may reduce translaminar movement of the active ingredient into the plant.

USE RESTRICTIONS

- **REI: 12 hours**
- **Resistance Management:** For resistance management, do not expose successive generations of the pest to Proclaim Insecticide. It is recommended to rotate products with different modes of action between generations.
- **Application Method:** Ground application only. Do not apply by air.
- **Amount of Water:** Use sufficient water volume to ensure good coverage of foliage. Do not use less than 10 GPA for ground applications. Under conditions such as high pest populations, dense foliage, or adverse weather conditions (such as high temperatures), use a greater volume of water to ensure adequate coverage. However, do not exceed 30 GPA for ground applications.
- **Maximum Amount per Application:** Do not apply more than 4.8 oz/A per application.
- **Application Interval:** Wait at least 7 days before repeating application.
- **Maximum Amount per Season:** Do not exceed a total of 14.4 oz of Proclaim Insecticide per acre per year.
- **Grazing:** Do not allow livestock to graze in treated areas.
- **Pre-Harvest Interval (PHI): 7 days** for seed to be used for research purposes. No part(s) of the treated crop shall be diverted to use as food or feed.
