**SYSTEMIC FUNGICIDE**

A trunk or flare root injected systemic fungicide for control of selected diseases in trees. Systemic broad-spectrum disease control for grasses, shrubs, and flowers in all growing zones applied as a foliar spray.

**ACTIVE INGREDIENT:**

Contains 1.3 lbs. active ingredient per gallon.

**WARNING/Aviso**

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand this label, find someone to explain it to you in detail.)

Manufactured by: ARBORJET, Inc., 99 Blueberry Hill Road, Woburn, MA 01801 781-935-9070

**KEEP OUT OF REACH OF CHILDREN**

**DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

Note: Do not apply more than 5.4 gals. of this product per acre per calendar year.

Failure to follow the directions for use and precautions on this label may result in plant injury or poor disease control.

**AGRICULTURAL USE REQUIREMENTS**

Use this product only in accordance with its labeling and with the Worker Protection Standard 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), notification to workers, and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 24 hours. PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:

- **• Coversalls**
- **• Chemical resistant gloves such as barrier laminate, butyl rubber ≥14 mils, or viton ≥14 mils**
- **• Protective eyewear**

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product’s concentrate. Do not reuse them. Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

**PERSONAL PROTECTIVE EQUIPMENT (PPE)**

Some materials that are chemically resistant to this product are listed below.

**Applicators and other handlers must wear:**

- **Long-sleeved shirt and long pants**
- **Chemical resistant gloves such as barrier laminate, butyl rubber ≥14 mils, nitrile rubber ≥14 mils, neoprene rubber ≥14 mils, polyvinyl chloride (PVC) ≥14 mils, or viton ≥14 mils**
- **Shoes plus socks**
- **Protective eyewear**

**ENGINEERING CONTROLS STATEMENT**

When handlers use closed systems or enclosed cabs in a manner that the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR 70.240(d)(4-6)), the handler PPE requirements may be reduced or modified as specified in the WPS.
Example of a high rate application to a 24" DBH tree:

1. The high rate application is 20 milliliters per inch DBH.
2. Multiply 20 ml x 24" DBH to determine the amount of formulation (20 ml x 24" DBH = 480 ml) to use. Add the concentrate to the delivery bottle.
3. Add an equivalent volume of water to the delivery bottle (480 ml).
4. Inject a total volume of 960 ml (480 ml formulation + 480 ml water) of solution.

Refer to the Tree Dosage Table for Micro-Injection and Micro-Infusion as an example of the amounts of this product and water to use.

* Use up to the amount indicated.

**Ingestion**

For pressurized injections, with the outlet valve open, connect the tank to the inlet valve and begin pumping solution until all air bubbles come out of the outlet valve. Direct the solution into a container and return the solution to the tank. Shut off the outlet valve. Pressure tank to 20-30 psi. Check for leaks and gently tap in trees if necessary. Maintain continuous pressure on the injection system until the full amount of solution is in the tree. After injection is complete, remove injection tees and leave drill holes unplugged. A water flush to cleanse the hole will assist with wound closure. Soil should be replaced around the tree. It is not necessary to treat the drill holes with wound paint or other sealing compounds.

Contact your local extension agent for more details on tree injection. The injection system described is meant as an example; please refer to manufacturer’s instructions when using other types of tree injection systems.

**Retreatment**

At the initial injection of this product, take notes on the level of disease in each tree. Reevaluate disease level in trees at 12-month intervals after treatment for the potential need for retreatment with this product. Preventive applications should be considered 12-36 months after the initial injection. Trees in high disease risk areas or high value trees should be evaluated for possible retreatment 12 months after each treatment.

Follow application procedures described above for repeat injections; new drill holes will be needed for subsequent treatments.

**OAK WILT: OAKS**

**Preventive Treatment**

Use 10 ml of this product in up to 1 liter of water per inch DBH. For very high disease pressure, use 20 ml of this product per inch DBH.

In the upper Midwest, treat oaks after June 15. Wounds in oaks in the upper Midwest between May 15 and June 15 attract insects that transmit the oak wilt pathogen.

Oak trees exhibiting less than 20% crown loss from oak wilt have the best chance of responding to treatment by this product. Preventive application is more effective than therapeutic treatment. Response to treatment will vary with trees in advanced stages of disease development.

Uninfected trees will generally absorb the full amount of product and water solution within 2 hours when the injection pressure is high. Trees exhibiting specific symptoms or those symptomless trees immediately adjacent to a diseased tree should be considered infected. Symptomless trees separated by a primary sloe line from infected trees will be at less risk of infection. Infected trees will absorb the material more slowly due to the vascular plugging caused by the disease. If the product and water solution is not absorbed within 24 hours, the tree is considered high risk and has a poor chance of survival.

Refer to the Retreatment section for details on retreatment.

**LEAF DISEASE: CRABAPPLES**

**Preventive Treatment**

Use 10 ml of this product in up to 1 liter of water per inch trunk diameter. For trees less than 10 inches trunk diameter, use 6 ml of this product per inch trunk diameter. Make applications when the trees are in full leaf and actively growing for control of the next season’s leaf disease development. Disease symptoms have the potential for not being reduced the year of application.

Refer to the Retreatment section for details on retreatment.

**ANTHRACNOSE: SYCAMORE**

**Preventive Treatment**

Use 10 ml of this product in up to 1 liter of water per inch DBH. For trees less than 10 inches DBH, use 6 ml of this product per inch DBH. Make applications when the trees are in full leaf and actively growing for control of the next season’s anthracnose development.

Refer to the Retreatment section for details on retreatment.

**DUTCH ELM DISEASE IN ELMS**

**Preventive and Therapeutic Treatment**

Use 6-10 ml of this product in up to 1 liter of water per inch DBH. For very high disease pressure, use 20 ml of this product per inch DBH.

Notes: (1) Accurate diagnosis of Dutch Elm Disease is important since this product only provides control of Dutch Elm Disease in elms. (2) This product will be most effective when used in conjunction with other cultural practices specified for management of Dutch Elm Disease (removal of dead elm trees, pruning of diseased tree limbs and branches, control of bark beetles, etc.). (3) Preventive applications can be made at 6-10 ml/inch DBH. The 6 ml rate should provide 24 months control and the 10 ml rate should provide 36 months control. (4) Therapeutic treatment in trees showing disease symptoms should be made at 10-20 ml/inch DBH. Retreat every 12-24 months, if needed. Response to treatment will vary with trees in advanced stages of disease development.

For further information on the proper diagnosis and control of Dutch Elm Disease, consult your local extension agent.

Refer to the Retreatment section for details on retreatment.
## General Information

This product is a systemic fungicide for use on turfgrasses for the control of:

**Anthracoise** (*Colletotrichum graminicola*)  
- Leaf spot (Bioponial spp., Drechsella spp.)

**Red thread** (*Laetisaria fuciformis*)  
- Nectridic ring spot (Leplosporia korae)*

**Brown patch** (*Rhizoctonia solani*)  
- Pink patch (Limonomyces roseipellet)

**Dollar spot** (*Sclerotinia homoeocarpa*)  
- Powdery mildew (Erysiphe graminis)

**Spring dead spot** (*Leptosphaeria korae*, *Leptosphaeria narnia*, *Ophiobollescripta herpotricha*, *Gaumannomyces graminis*)  
- Stripe smut (*Ustilago striiformis* and *Urocystis agropyri*)

**Fusarium patch** (*Fusarium nivale*)  
- Take-all patch (*Gaumannomyces graminis*)

**Gray leaf spot** (*Pyricularia grisea*)  
- Yellow patch (*Rhizoctonia solani*)

**Gray snow mold** (*Tylethodium dichondrae*)  
- Zoysia patch (*Rhizoctonia solani*)

This product also controls numerous diseases on ornamentals and other landscape and nursery plantings such as powdery mildews, rusts, leafspots, scabs, and blights. Refer to the appropriate section of this label for specified diseases and plants.

Do not apply this product through any type of irrigation system.

### MIXING INSTRUCTIONS

Fill the spray tank ½ to ¾ full with water. Add the proper amount of this product, then add the remaining water. Provide sufficient agitation during mixing and application to maintain a uniform emulsion.

If this product is tank mixed with other products, use the following sequence:

1. Always check the compatibility of the tank mix using a jar test with proportionate amounts of this product, other chemicals to be used, and the water, before mixing in the spray tank.
2. Provide sufficient jet or mechanical agitation during filling and application to keep the tank mix uniformly suspended.
3. Fill tank at least ½ full of clean water.
4. Add water to the tank first, allowing them to completely suspend in the tank before proceeding. Premixing the product in water before adding to the tank will hasten the process.
5. Add flowables or suspensions next.
6. Add the proper amount of this product.
7. Add emulsifiable concentrates last.
8. Do not leave tank mix combinations in the spray tank for prolonged periods without agitation. Use only the filled spray tank for application.

### TANK MIXES

This product can be tank mixed with other fungicides for broader spectrum control. This product is also compatible with numerous herbicides and insecticides. Check compatibility before tank mixing.

- Add **Unite® (3 pts./100 gals.)** to tank mixes which are incompatible. Follow the directions under the section of this label for specified diseases and plants.

- Tank mix with low label rate of one of the following fungicides: Daconil 2787 F (*Manicure® 6FL Daconil Ultra* 
  *Manicure® Ultra*). Tank mix the 1 fl. oz. product rate with a registered contact fungicide at the label rate.

- Tank mix with a registered contact fungicide labeled for brown patch control at the label rate. Begin applications in May or June before the disease is present. Use the higher rates of this product and shorter intervals under conditions of high temperatures and high humidity.

- Tank mix the 1-4 fl. oz./1,000 sq. ft. product rate with a registered contact fungicide at the label rate.

- Tank mix the 1 fl. oz./1,000 sq. ft. rate, tank mix with a registered contact fungicide at the label rate.

- Tank mix the 1 fl. oz./1,000 sq. ft. rate with a registered contact fungicide at the label rate.

- Tank mix with a registered contact fungicide labeled for brown patch control at the label rate. Begin applications in May or June before the disease is present. Use the higher rates of this product and shorter intervals under conditions of high temperatures and high humidity.

- Tank mix the 1 fl. oz./1,000 sq. ft. rate, tank mix with a registered contact fungicide at the label rate.

- Make applications in April and May, depending on local specifications.

- Make applications in April and May, depending on local specifications.

- Apply once in the fall after grass becomes dormant or in the early spring before grass starts to grow.

- Apply once in the fall after grass becomes dormant or in the early spring before grass starts to grow.

- Apply once in the fall after grass becomes dormant or in the early spring before grass starts to grow.

- Apply once in the fall after grass becomes dormant or in the early spring before grass starts to grow.

- Make one application in the late fall before snow cover. Do not apply on top of snow. For optimum disease control, the 2 and 3 fl. oz. product rates should be tank mixed with either PCNB or chlorothalonil at label rates.

- Apply 2 fl. oz. of this product per 1,000 sq. ft. with the label rate of the above mentioned contact fungicides.

### ESTABLISHMENT OF COOL SEASON TURFGRASS

The primary use of this product is as a fungicide for use against the diseases listed on this label. As an additional benefit, this product will improve the establishment rate when it is applied to cool season grass seedlings or sod.

**New Seedlings:** Apply 1 fl. oz./1,000 sq. ft. at the 2 to 3-stage leaf growth of faster root development and top growth.

**Sod:** Apply 1 fl. oz./1,000 sq. ft. 2-6 weeks before cutting for increased sod knitting and faster establishment after laying.

[CONTINUED]
DISEASE CONTROL IN NURSERIES (FIELD) AND LANDSCAPE PLANTINGS

1. Use this product in a preventative disease control program. To determine the use directions for controlling a disease on an ornamental plant species, select the plant species in Table 1. The number in parenthesis following the plant species refers you to the disease(s) controlled in Table 2. Find the disease in Table 2. The number in brackets following the disease refers you to the application regime in Table 3.

2. Allow spray to dry before overhead irrigation is applied.

3. Optimum benefit of this product is obtained when used in conjunction with sound disease management practices.

General Instructions

Use this product at rates of 2.24 fl. oz./100 gallons of water for control of diseases of ornamental plant species (Refer to Tables 1, 2, and 3).

Note: For outdoor use, apply up to 5.4 gallons of this product (acre/crop/year). For general disease control in landscapes, apply 6-8 fl. oz./100 gallons of water every 21 days. For best control, begin applications of this product before disease development.

Note: Plant tolerances to this product have been found to be acceptable for the specific genera and species listed under the Directions for Use section of this label. Other plant species can be sensitive to this product and diseases other than those listed may not be controlled. Before using this product on plants or for diseases that are not listed in the Directions for Use section of this label, test this product on a small scale basis first. Apply the specified rates for a particular type of disease, i.e., rust, powdery mildew, etc., and evaluate for phytotoxicity and disease control prior to widespread use.

Restriction: Do not apply this product to African violets, begonias, Boston fern, or geraniums.

TABLE 3. APPLICATION REGIMES

1. Mix 2.4 fl. oz. of this product in 100 gallons of water and apply as a full coverage spray to the point of drip. Repeat applications every 14-21 days during periods of active growth.

2. Mix 9.8 fl. oz. of this product in 100 gallons of water and apply as a full coverage spray to the point of drip. Begin applying when conditions are favorable for disease development and apply as necessary. For blackspot, apply with a registered contact fungicide labeled for blackspot. For Calendula, apply every 30 days. For diplodia tip blight, make 3 applications every 14 days prior to major period of infection. For juniper powdery mildew, mix the first application as soon as junipers start to grow, and repeat the applications every 14-21 days during periods of active growth.

3. Mix 8-12 fl. oz. of this product in 100 gallons of water and apply as a full coverage spray to the point of drip. Apply every 10 days, beginning when conditions are favorable for the disease development. For peonies, apply the 12 fl. oz. rate beginning at bud break. Apply 3 times at 14-day intervals. For rhododendrons, apply 8.5 fl. oz. at 14 to 21 day intervals. For black spot, apply 12 fl. oz. at 7 day intervals or 20 fl. oz. at 14 day intervals. For impatiens, bayberry, bittersweet, sweet gum, and wax myrtle, the maximum use rate is 8 fl. oz.

4. Mix 16 fl. oz. of this product in 100 gallons of water and apply as a full coverage spray to the point of drip. Apply every 14-28 days, beginning when conditions are favorable for disease development. For Douglas firs needle rust, apply once in May. For tip blight, start applications in mid-late winter and apply 3 times at 2-month intervals.

5. Mix 20-24 fl. oz. of this product in 100 gallons of water and apply as a full coverage spray to the point of drip. Apply during June to August time period.

Restriction: To avoid possible illegal residues, do not apply to apple, cherry, citrus, nectarine, pear, pecan, plum or walnut trees that will bear harvestable fruit within 12 months. Do not apply to maple trees that will be used for maple syrup production within one year.

Refer to the Retreatment section for details on retreatment.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

PESTICIDE STORAGE: Store in original container in a cool area out of the reach of children.

CONTAINER DISPOSAL: Nonrefillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds, then rinse into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling, if available, or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by State and local authorities. Plastic containers are also disposable by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

WARRANTY DISCLAIMER

The directions for use of this product must be followed carefully. To the extent consistent with applicable law, (1) the goods delivered to you are furnished “as is” by manufacturer or seller and (2) manufacturer and seller make no warranties, guarantees, or representations of any kind to buyer or user, either express or implied, or by usage of trade, statutory or otherwise, with regard to the product sold, including, but not limited to merchantability, fitness for a particular purpose, use or eligibility of the product for any particular trade usage. Unintended consequences, including but not limited to ineffectiveness, may result because of such factors as the presence or absence of other materials used in combination with the goods, or the manner of use or application, including weather, all of which are beyond the control of manufacturer or seller and assumed by buyer or user. This writing contains all of the representations and agreements between buyer, manufacturer and seller, and no person or agent of manufacturer or seller has any authority to make any representation or warranty agreement relating in any way to these goods.

LIMITATION OF LIABILITY

To the extent consistent with applicable law, in no event shall manufacturer or seller be liable for special, incidental, or consequential damages, or for damages in their nature of penalties relating to the goods sold, including use, application, handling, and disposal. To the extent consistent with applicable law, manufacturer or seller shall not be liable to buyer or user by way of indemnification to buyer or to customers of buyer, if any, or for any damages or sums of money, claims or demands whatsoever, resulting from or by reason of, or rising out of the misuse, or failure to follow label warnings or instructions for use, of the goods sold by manufacturer or seller to buyer. All such risks shall be assumed by the buyer, the user, or its customers. To the extent consistent with applicable law, buyer’s or user’s exclusive remedy, and manufacturer’s or seller’s total liability shall be for damages not exceeding the cost of the product.

If you do not agree with or do not accept any directions for use, the warranty disclaimers, or limitations on liability, do not use the product, and return it unopened to the Seller, and the purchase price will be refunded.
