Sulfate of Potash is a multi-nutrient fertilizer rich in potassium and plant-available sulfate sulfur. Sulfate of Potash is used on high-value crops everywhere for better yields and quality.

DIRECTIONS FOR USE:

Use in accordance with recommendations of a qualified individual or institution, such as, but not limited to, a certified crop advisor, agronomist, university crop extension publication, or apply according to recommendations in your approved nutrition management plan.

This fertilizer is intended for use on agricultural crops, turf and in other industries.

SULFATE OF POTASH

- **HIGH-PERFORMANCE** Potassium. An ion exchange method of production is used, which results in material with a guaranteed minimum of 53% K₂O.
- **LOW-CHLORIDE AND LOW-SALT** index are two primary reasons why high-value crops and crops sensitive to salts and chlorides prefer Sulfate of Potash. Lower risk of crop injury from salts or chlorides typically results in higher yields and a better quality crop.
- **VALUABLE DUAL NUTRIENT** containing 18% sulfur in the immediately plant-available sulfate form. Sulfur is required to make chlorophyll, enzymes, vitamins and other essential compounds in all crops; there can be no protein without sulfur.
- **SIZED** to blend well with most other agricultural grade nutrient sources and performs well in broadcast spreaders.

LOW SALT INDEX PER UNIT POTASSIUM

Sulfate of Potash (SOP)	0.85
Muriate of Potash (MOP)	1.93
Potassium Nitrate (KNO ₃)	1.58
Potassium Magnesium Sulfate	1.97
