Fertigation:

Can be applied through Center Pivot, Drip and Micro Sprinkler Irrigation systems. Continue irrigation for a minimum of 2 hours after application to flush the lines and to maximize nutrient distribution with drip and micro sprinkler use. Inject after the irrigation water filter.

Mixing with water for field storage is generally not recommended. Products blended with water should be used immediately and not stored for prolonged periods.

Aerial Application:

In aerial application use adequate water to obtain thorough coverage.

Caution:

Foliar applications close to harvest may leave a brown residue on the harvestable portion of the crop. Rainfall, sprinkler irrigation or high humidity should alleviate this condition.

Caution:

Always check compatibility with other products prior to use.

Do NOT apply with conventional calcium fertilizers.

Fertilizer solutions with a pH of 4 or less may not be compatible.

Combining with liquid fertilizer solutions is more effective if done at a blending plant with vigorous agitation in blending process.

STORAGE AND DISPOSAL

STORAGE: Store in original containers only. Keep containers tightly closed when not in use. Store in a cool, dry well-ventilated area, preferably in a locked storage area away from children, feed and food products, and seed. Store at ambient temperatures. Do not contaminate water, food, or feed by storage or disposal. **DISPOSAL:** Do not reuse container. Completely empty container into application equipment. Thoroughly rinse container, adding rinse water to the spray tank.
