Contains 2 lbs. Diquat cation per gallon as 3.73 lbs. salt per gallon.

FAILURE TO FOLLOW THE DIRECTIONS FOR USE AND PRECAUTIONS ON THIS LABEL
MAY RESULT IN POOR PEST CONTROL, CROP INJURY, OR ILLEGAL RESIDUES.

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

Follow all applicable directions, restrictions, and precautions including statements pertaining to the Worker Protection Standard, on the EPA-registered Reglone Desiccant label.

This label must be in the possession of the user at the time of application.

REGLONE Desiccant can be applied as a post-directed application to the row middles either prior to transplanting or as a post-directed hooded spray application to the tomato, eggplant and green pepper row middles when the transplants are well established.

For Control of Nightshade and Parthenium spp:

- Apply 1 quart of REGLONE Desiccant in 20 to 50 gallons of water per treated acre when weeds are 2 to 4 inches in height. Do not exceed 25 psi. spray pressure. A maximum of two applications can be made during the growing season. Weed control will decrease when treatment is made beyond the 4 inch stage of growth. Always add 2 pints of a 75% nonionic spreader per 100 gallons of spray mix. REGLONE Desiccant can be tanked mixed with Gramoxone Inteon for this use for the crops listed on the Gramoxone Inteon label.

RESTRICTIONS:

- Do not allow spray to contact crop foliage or treat under conditions which will cause spray drift, as phytotoxicity to crop plants will result. Do not apply when wind speed exceeds 5 mph.
- Do not use dirty or muddy water for REGLONE Desiccant dilution as REGLONE Desiccant will be inactivated.
- Do not apply later than 30 days before harvest.
- Do not apply this product for this use through any type of irrigation system.
