**12. ECOLOGICAL INFORMATION****Summary of Effects:**

Tiafenacil is practically non-toxic to birds, fish and aquatic invertebrates. Tolpyralate is highly toxic to terrestrial and aquatic plants.

**Ecotoxicity Data (Tiafenacil):**

Fish (Rainbow Trout) 96-hour LC<sub>50</sub> > 79 mg/L (practically non-toxic)

Invertebrate (*Daphnia magna*) 48-hour EC<sub>50</sub> > 78.29 ppm (practically non-toxic)

Algae (*Pseudokirchneriella subcapitata*) 96-hour ErC<sub>50</sub> = 6.6 µg/L (highly toxic)

Aquatic plant (*Lemna gibba*) 7-day NOEC = 1.4 mg/L

Bobwhite Quail Acute LD<sub>50</sub> > 2250 mg/kg body weight (practically non-toxic)

Mallard Duck Acute LD<sub>50</sub> > 2250 mg/kg body weight (practically non-toxic)

Sub-Acute Dietary Bird LC<sub>50</sub> > 5620 ppm in diet for both Quail and Mallard

**Persistence / Degradability:**

Tiafenacil degrades rapidly in soil, with half-life values ranging from 2 – 67 days in field conditions. Hydrolysis is dependent on pH, with increasing pH causing faster degradation. Hydrolysis @ 25 - 35°C:

DT<sub>50</sub> = stable @ pH 4, 20.5 days @ pH 7, 5.1 days @ pH 9.

**Bioaccumulative Potential:**

The potential for tiafenacil to bioaccumulate is extremely low (Log P<sub>ow</sub> = 2.0).

**Mobility in Soil:**

Tiafenacil shows moderate to high mobility in various soils under laboratory conditions, but field dissipation studies show limited downward movement (no more than 6 inches) through soil leaching.

**13. DISPOSAL CONSIDERATIONS****Waste Disposal:**

Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility. Do not contaminate water, food, or feed by disposal.

**Container Disposal:**

Nonrefillable container. DO NOT reuse or refill this container. Proper disposal procedures depend on the size and composition of the product container, so follow the disposal directions on the product label which are specific to the container.

This chemical is a pesticide product registered by the Environmental Protection Agency and is subject to certain labeling requirements under federal pesticide law (FIFRA). FIFRA requirements differ from the OSHA classification criteria and hazard information required for safety data sheets in Section 2 above, and for workplace labels of non-pesticide chemicals. Following is the hazard information as required by FIFRA on the pesticide label:

**CAUTION**

Harmful if swallowed or absorbed through skin. Avoid contact with skin or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet. Remove and wash contaminated clothing before reuse. Do not apply directly to water, areas where surface water is present, or intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment wash waters or rinsate.

Tiafenacil has properties and characteristics associated with chemicals detected in ground water. This chemical may leach into ground water if used in areas where soils are permeable, particularly where the water table is shallow.

Tiafenacil may impact surface water due to runoff of rainwater. This is especially true for poorly draining soils and soils with shallow groundwater. This chemical is classified as having high potential for reaching surface water via runoff for several days after application. A level, well-maintained buffer strip between areas to which this chemical is applied and surface water features such as ponds, streams, and springs will reduce the potential loading of this chemical from runoff water and sediment. Runoff of this chemical will be reduced by avoiding application when rainfall is forecast to occur within 48 hours.
