GENERAL RECOMMENDATIONS

Before including any other fertilizer with RISER® in seed furrow applications conduct a jar test of the products to be mixed in their respective proportions and observe it for 24 hours, before mixing large quantities. The person making the recommendation or application is responsible for verifying the seed safety of any products mixed with RISER. When used as directed this product does not supply all nutrients required by plants and is to supplement a soil fertility program based on soil tests.

SOIL or FOLIAR APPLICATIONS: Use 2.0 to 5.0 gallons RISER per acre in furrow at planting or foliar application. Water may be added to dilute RISER when higher volume application is desired. Optimum rate of application will vary between fields, depending on soil pH and organic matter content. For best results, follow soil test or plant analysis recommendations.

TRANSPLANT SOLUTIONS: Use 0.5 to 1.5 gallons of RISER per acre in 100 gallons per acre transplant water. For tobacco transplant solution use 0.5 to 1.5 gallons of RISER per acre in 100 gallons per acre.
