

SSB

MICROBIAL CONSORTIUM

LIQUID MICROBIAL BIOSTIMULANT

DESCRIPTION

SSB is a microbial consortium based on beneficial bacteria and mycorrhizae which promotes vegetative and reproductive growth.

COMPOSITION

Active Ingredients:

<i>Glomus aggregatum</i>	0.3	prop/ml
<i>Glomus etunicatum</i>	0.3	prop/ml
<i>Glomus intraradices</i>	0.3	prop/ml
<i>Glomus mosseae</i>	0.3	prop/ml
<i>Enterobacter cloacae</i>	1×10^6	CFU/ml
<i>Pseudomonas fluorescens</i>	5×10^6	CFU/ml
<i>Pseudomonas aeruginosa</i>	4×10^6	CFU/ml
<i>Acinetobacter calcoaceticus</i>	2×10^6	CFU/ml
<i>Pseudomonas putida</i>	3×10^6	CFU/ml
<i>Bacillus subtilis</i>	4×10^6	CFU/ml
<i>Bacillus licheniformis</i>	3×10^6	CFU/ml
<i>Bacillus thuringiensis</i>	2×10^6	CFU/ml
<i>Saccharomyces cerevisiae</i>	1×10^6	CFU/ml

99.4% Inert Ingredients - Water

Total CFU per milliliter is 25×10^6

SPECIFICATIONS

SSB improves crops' water absorption and nutrient uptake. **SSB** not only improves germination and stress tolerance, as well as root growth, but also works as seed inoculant.

SSB has shown in biological efficacy tests that it promotes crop growth and development with greater root and plant biomass achieving improved blooming and fruiting; yielding bigger and best-quality fruit, as well as increased shelf life.

COMPATIBILITY

Before mixing, water or base optimal range is pH 5.0 - 8.0. Do not mix the product with biocides and/or bactericides. Do not mix with or expose the product to fertilizers within the same tank or container. Exposure to direct sunlight should be avoided. The mix should be applied within the same day of its preparation.

RECOMMENDATIONS

Botanical families	Crops	Dose (oz. / acre)	Directions for use
Rosaceae	Raspberry Strawberry Apple BlackBerry	14 - 21	It is recommended to apply once in short crops and twice in perennial crops at the time of root growth peaks. Apply at the beginning of the culture to achieve the maximum percentage of mycorrhiza colonization in 4 to 5 weeks. Apply to increase the capacity of the roots to absorb water and take nutrients. Apply to increase tolerance to abiotic stresses such as drought, salinity and extreme temperatures.
Rutaceae	Lemon Orange		
Ericaceae	Blueberry		
Juglandaceae	Walnuts		
Lauraceae	Avocado		
Malvaceae	Cotton		
Vitaceae	Grape		
Fabaceae	Alfalfa Dry Bean		
Solanaceae	Potato Bell pepper Pepper Tomato		
Cucurbitaceae	Squash Melon Cucumber Watermelon		
Asteraceae	Lettuce		
Brassicaceae	Broccoli Cauliflower Cabbage		
Asparagaceae	Asparagus		
Liliaceae	Onion		
Poaceae	Sugarcane Corn Sorghum Wheat		
	Turf Ornamentals		

FORMULATION

Colorless liquid.
