**GENERAL INFORMATION**

Strongleaf is a starter fertilizer designed to complement a complete tobacco and/or vegetable fertility program. For row crop use only.

**DIRECTIONS FOR USE + APPLICATION RATE**

Store and transport Strongleaf in poly or stainless steel only. Thoroughly agitate Strongleaf before transferring to another vessel. Jar test for compatibility before mixing in any other fertilizer, pesticide, or water which is acidic or basic.

**TOBACCO USE**

**SOIL APPLICATION:** Use 2-5 gallons (256-640 oz) per acre in-furrow at planting. DO NOT add any other fertilizer material containing N-P-K to Strongleaf when applied in the seed furrow. Water may be added to dilute Strongleaf when higher volume application is desired. Optimum rate of application will vary between fields, depending on soil pH and organic matter content. For best results, follow soil test or plant analysis recommendations.

**TRANSPLANT SOLUTIONS:** Use 0.5-1.5 gallons (64-192 oz) per acre in 100 gallons/acre transplant water.

**VEGETABLE USE**

5 gallons (640 oz) two weeks ahead of transplanting as a bed charge OR 2.5 gallons (320 oz) one week ahead of transplanting as a bed charge followed by 3 qt (96 oz) per week until maximum amount is reached (5 gallons or 640 oz).

When there is no bed charge, use 3 qt (96 oz) through drip irrigation weekly with a maximum of 5 gallons (640 oz).
