

Sustain 25

25-0-0 with 25% Slow Release Nitrogen

*Sustain 25-0-0 provides 75% readily available Nitrogen for quick uptake and 25% **Slow Release Nitrogen** for extended plant uptake.*

All Nitrogen is in the Urea form resulting in minimal leaf burn.

SRN offers the following Advantages:

- *Increases Total Nitrogen uptake due to availability over a longer period of time compared to most N solutions.*
- *Reduced wash off potential.*
- *Less leaf burn.*
- *Low Nitrogen Volatility.*
- *Improved plant safety.*
- *Excellent mixing with most crop protection products.*
- *Improvement in overall Nitrogen Use Efficiency.*

Use of Controlled Release Fertilizers (CRF) or Slow Release Fertilizers (SRF) can reduce nutrient losses, increase nutrient-use efficiency, and protect the environment. The application of CRF's or SRF's is considered to be a Best Management Practice (BMP) tool for crop production.
