APPLICATIONS INSTRUCTIONS:

Apply SHENZI 400SC Insecticide at 1.3-1.75 fluid ounces per acre as a foliar spray or via overhead chemigation.

For best results with foliar sprays, add Methylated Seed Oil (MSO) adjuvant at 1 gallon per 100 gallons of spray volume (1% v/v). For best results via overhead chemigation applications, apply in 0.1- to 0.2-acre inches of water and add MSO at 12 - 16 fluid ounces per acre.

Apply when populations reach local established thresholds to prevent crop damage.

SHENZI 400SC Insecticide applied at the 1.3-1.75 fluid ounces per acre rate should be used on early-stage instars of Cabbage Looper (1st through 3rd instar). For larger larvae that may require higher rates (1.75 -3.25 fluid ounces per acre), consult the EPA-registered label.

See the APPLICATION section of the SHENZI 400SC Insecticide Federal label for additional guidance and restrictions regarding overhead chemigation.

RESTRICTIONS:

- Do not apply more than 7.7 fl oz SHENZI 400SC Insecticide insect control or 0.2 lb ai of chlorantraniliprole containing products per acre per calendar year.
- Do not make more than 4 applications per acre per crop.

See the RESISTANCE MANAGEMENT section of the SHENZI 400SC Insecticide insect control Section 3 Federal label for additional guidance on insecticide resistance management.
