

PRODUCT BULLETIN

Slug-Fest All Weather Formula EPA Reg. No. 71096-4

For chemigation applications to the soil in citrus

1. **FIFRA Section 2(ee) Recommendation:** This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or accepted by the U.S. Environmental Protection Agency. This product bulletin must be in the possession of the user at the time of pesticide application. Follow all applicable directions, restrictions, precautions, and Conditions of Sale on the EPA registered label. Refer to the container label for additional instructions. Application directly to plant parts is prohibited. Always read and follow label directions.

USE RESTRICTIONS: **DO NOT** apply directly or allow to drift to plant parts or downed fruits. **DO NOT** inject Slug-Fest at full strength. **DO NOT** apply when wind speed favors drift beyond the area to be treated.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Apply Slug-Fest only through microsprinkler (Fan-Jet type D or similar) irrigation systems. Do not apply this product through any other type of irrigation system. Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water. If you have questions about calibration, you should contact a State Extension Service specialist, equipment manufacturers or other experts. Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system. A person knowledgeable of the chemigation system and responsible for its operation or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

Operating Instructions:

1. The irrigation system must contain a functional check-valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water-source contamination from backflow.
2. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back towards the injection pump.
3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
5. The irrigation line or water pump must include a functional pressure switch which stops the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
6. System must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
7. Application directly to plant parts is prohibited.
8. Slug-Fest must be applied on the schedule specified in the specific crop use directions, and not according to the irrigation schedule.
9. Dilute in adequate amount of water prior to injecting in the irrigation system for chemigation. Keep agitator running to maintain constant agitation when filling the tank and while using the injection system.
10. Use no finer than a 50 mesh diameter screen in the distribution system.
11. Slug-Fest All Weather Formula can be injected as a separate application or at the end of the irrigation cycle.
12. Stop injection equipment after treatment is completed and continue to operate irrigation system until Slug-Fest All Weather Formula has been cleared from last microsprinkler head.
13. **THE APPLICATOR IS RESPONSIBLE FOR AVOIDING OFF-SITE SPRAY DRIFT.**

Crop Use Site	Maximum Single Application Rate fl. oz. per treated acre	Minimum Days Between Retreatment	Maximum Number of Applications Per Season	Preharvest Interval	Maximum number of applications per year
Citrus (Make application when foliage and fruit are completely dry but soil is wet following an irrigation. Apply to soil under trees)	59	14	6	0	6
