Tank Mix Use with Strobilurin Fungicides in Wheat and Barley

ATTENTION

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- Read the label affixed to the container for Starane[®] NXT herbicide before applying. Carefully follow all precautionary statements and applicable use directions.
- Use of Starane NXT according to this supplemental labeling is subject to all use precautions and limitations imposed by the label affixed to the container for Starane NXT.

Directions for Use

Tank mixes of herbicides containing bromoxynil and fungicides containing strobilurin components have been known to cause occasional crop injury in the form of temporary leaf burning.

Starane[®] NXT herbicide may be applied with strobilurin-containing fungicides if the risk of crop injury is acceptable, and the strobilurin fungicide being applied is registered for use on the crop being treated. All use instructions, precautions, and restrictions on the tank mix product label must be followed. Dow AgroSciences makes the Product available for use in the manner described in this Supplemental Labeling on the basis that, in the sole opinion of the user, the benefits and utility derived from the use of the Product on the Crop outweigh the potential risk of Crop injury or loss.

Overall crop tolerance can be optimized by:

- Increasing the amount of carrier applied with the tank mix
- Avoiding application when the treated crop is under stress from environmental factors such as temperature and soil moisture extremes
- Making application to the treated crop when foliage is dry

Because the activity of the above referenced components is not systemic, recovery of the crop is generally rapid with no lasting effect.

If these risks are not acceptable, the unopened Product may be returned to the seller for a refund or used for a different labeled use in accordance with the label affixed to the Product container.
