## **STREAMLINE HERBICIDE®**

EPA REG. NO. 432-1570

## **KROVAR I DF HERBICIDE®**

EPA REG. NO. 432-1551

## **OUST XP HERBICIDE®**

EPA REG. NO. 432-1552

**Streamline, plus Krovar I DF, and/or Oust XP herbicide for use in non-crop sites for non-selective control of vegetation on federal and state government installations including storage, testing and training facilities.**

## ***FIFRA 2(ee) Recommendation***

### **FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE(S) OF ARIZONA, NEW MEXICO, NEVADA, AND UTAH**

**FIFRA Section 2(ee) Recommendation:** This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by the EPA. This product bulletin should be in the possession of the user at the time of application of the product. All applicable directions, restrictions and precautions on the EPA registered label are to be followed.

#### **DIRECTIONS FOR USE**

It is a violation of federal law to use this product in a manner inconsistent with its label. Always read this FIFRA 2(ee) bulletin and the entire label on the product container before using this product.

Streamline Herbicide may be used at 4.75-11.5 ounces per acre and tank mixed with Krovar I DF Herbicide and/or Oust XP Herbicide for non-selective control of grass, broadleaf weeds and brush in non-crop sites, including halogeton, rabbitbrush, cheatgrass, and russian thistle. Refer to each product label to determine required rate to control target species.

Use sufficient carrier volume to provide uniform coverage of the target vegetation.

#### **SURFACTANTS**

A spray adjuvant may be included with applications. For best results, especially for perennial weeds, add a crop oil concentrate or methylated seed oil at 1% v/v ( 1 gallon per 100 gallons of spray) OR, add nonionic surfactant at 0.25-0.5% v/v ( 1-2 quarts per 100 gallons of spray).

#### **IMPORTANT PRECAUTIONS**

Refer to the Streamline, Krovar, Oust Herbicide, and any tank mix partner labels for information on weed species controlled, additional use directions, restrictions, and precaution. The most restrictive provision on the label shall apply.

Certain species may, in particular, be sensitive to low levels of Streamline Herbicide including but not limited to, conifers (such as Douglas fir, Norway spruce, ponderosa pine and white pine), deciduous trees (such as aspen, Chinese tallow, cottonwood, honey locust, magnolia, poplar species, redbud, silver maple and willow species) and ornamental shrubs (such as arborvitae, burning bush, crape myrtle, forsythia, hydrangea, ice plant, magnolia, purple plum and yew).

Injury or loss of desirable trees or vegetation may result if Streamline Herbicide is applied on or near desirable trees or vegetation, on areas where their roots extend or in location where the treated soil may be washed or moved into contact with their roots. Consider site specific characteristics and conditions that could contribute to unintended root zone exposure to desirable trees or vegetation. Root zone areas of desirable trees or vegetation are affected by local conditions and can extend beyond the tree canopy. If further information is needed regarding root zone area, consult appropriate state extension service, professional consultation or other qualified authority.
