TELONE™ II

Soil Fumigant

(EPA Reg. No. 95290-1)

Special 2(ee) Recommendation†

Cyst-Forming Nematode Suppression In Sugar Beets

For Distribution and Use Only Within the States of Idaho, Oregon and Washington

ATTENTION

†This recommendation is made as permitted under FIFRA Section 2(ee) and has not been reviewed or approved by EPA.

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- Read the label affixed to the container for TELONE™ II Soil Fumigant before applying. Carefully follow all precautionary statements and applicable use directions except as specified below.
- Use of TELONE™ II according to this supplemental labeling is subject to all use precautions and limitations imposed by the label affixed to the container for TELONE™ II.

Directions for Use

For Cyst-Forming Nematode Suppression In Sugar Beets: Apply TELONE™ II Soil Fumigant as a broadcast plow sole treatment at a rate of 12 to 17 gallons per acre for suppression of light to moderate infestations of cyst-forming nematodes. Treat when soil moisture is ideal for tillage. TELONE™ II should be placed at least 12 inches below the surface of the final seedbed. Follow instructions for soil sealing and soil fumigation interval in the "Directions for Use" section of the product label for TELONE™ II.
