TIGER[®] Bean Mix (65%S, 12%Mn, 3%Zn)

— Granular Micronutrient Fertilizer —

Product Description

TIGER Bean Mix is a new formulation of granular micronutrients that offers several improved features over conventional micronutrient sources.

- Reduced heavy metal content
- Improved handling with cleaner (less dust) and uniform sizing.
- New “RCO” Technology allows for quick dispersion and increased performance.
- “Ultra Low” analysis products allows for greater micronutrient distribution and performance.
- Dual nutrient formulations (S + Micros) allows for greater value over conventional source.

TIGER Bean Mix Is a unique, granular micronutrient fertilizer that delivers agronomically and economically, providing excellent handling characteristics.

TIGER Bean Mix Provides a cost effective method of correcting micronutrient deficiencies. The low analysis mix of micronutrients are embedded into the TIGER[®] Sulphur formulation increasing the micronutrient feeding sites and improving plant uptake. The season long release of both sulphur and micronutrients allows for increased availability throughout the growing season, while the acid forming particles reduce the soils pH increasing phosphate and micronutrient availability. **TIGER Bean Mix** is specially formulated to meet the micronutrient demand and improve Nitrogen Use Efficiency ensuring sulphur does not leach from the soil profile.

Guaranteed Analysis

65%S, 12%Mn, 3%Zn, 20%Inert Ingredients

Divided From: Elemental Sulphur, Zinc Oxide, Manganese Oxide, Inert Ingredients

General Application Recommendations

The best methods of detecting copper deficiencies are soil testing, tissue testing as well as using visual identifications of symptoms in moderate to sever deficiencies.

TIGER Bean Mix is a unique low analysis micronutrient source the ensures optimal root to particle contact for uptake into the plant. **TIGER Bean Mix** can be banded or broadcasted applied.

TIGER[®] Bean Mix Recommendations

TIGER Bean Mix - General use Guidelines

When used as a part of a balanced fertility program, **TIGER MICRONUTRIENTS[®] fertilizers** can provide a season-long source of sulphur and micronutrients for optimized bean productions.

TIGER Bean Mix granular micronutrient fertilizers should be applied according to soil test recommendations.

Application Rates– For optimum performance apply TIGER Bean Mix at 30-60 lbs/acre (30-60kg/ha) for bean production.

TIGER Bean Mix Fertilizer can be applied in a band or seed row applied. **Note seed row applications should no exceed 40lbs/acre (40 kg/ha).**

TIGER MICRONUTRIENTS fertilizers are formulated to provide a cost-effective source of sulphur and micronutrient fertilizers. They offer superior blending and handling qualities with improved handling and performance when compared to other micronutrient fertilizer sources. Do not blend or store with strong oxidizers (ammonium nitrate),

TIGER MICRONUTRIENTS fertilizers can be applied alone or blending with granular fertilizers.

Broadcast Applications of **TIGER MICRONUTRIENTS fertilizers** exposes the **TIGER[®] Sulphur/ Micronutrient** granule to moisture from rainfall or irrigation improving dispersion of the nutrients on the soil surface. The shallow incorporation will assist in evenly distributing the sulphur/micronutrient particles into the soil and will improve root access and product performance.

TIGER MICRONUTRIENTS fertilizers application rates should be based on agronomic recommendations form soil tests, and tissue analysis.

Please consult agronomic assistance if required.
