**TRACE-IN Cu** is fully EDTA chelated through a chemical reaction process. It is compatible with most fertilizers and chemicals due to its stability in most application solutions or soil pH. **TRACE-IN Cu** will provide the right level of copper to the plant following the recommended dosage. The best practice is to apply **TRACE-IN Cu** to the plant before deficiency symptoms appear in order to avoid crop yield loss. Best performance is obtained when crops have an adequate supply of water. A jar test is advisable when mixed with any other materials.
