

**FIFRA §2(ee) RECOMMENDATION  
FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF GEORGIA**

**TREFLAN® HFP HERBICIDE**

- This labeling must be in the possession of the user at the time of pesticide application.
- It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.
- All applicable directions, restrictions and precautions on the EPA registered label are to be followed.

**Intercropping Cucurbits with Cotton**

**Intercropping with cotton:** Apply Treflan HFP prior to weed emergence or with registered burndown products prior to transplant of labeled crops into plastic mulch to control or suppress existing weeds in row middles.

A single 0.5" water event, either by rainfall or sprinkler irrigation within 1 day of Treflan HFP application and at least a 1 day interval between washing Treflan HFP from the mulch and crop transplanting is required to activate the Treflan HFP and to remove any residues from the plastic. If Treflan HFP is mixed with other labeled herbicides, follow the most restrictive planting interval and rainfall/irrigation requirements to ensure herbicide removal from mulch has occurred prior to transplanting.

**Restrictions:**

Refer to respective burndown tank-mix partner labels and follow the most restrictive labeling regarding plant back restrictions, rotational guidelines, methods of applications, and surfactant requirements of the tank mixture components.

**Broadcast Application Rates per Acre**

Soil Texture	Treflan HFP(pints)
Coarse	1.0
Medium	1.25 -1.5
Fine	1.5 – 2.0

- Coarse and medium soils with 2 to 5% organic matter - 1.5 pints
- Fine soils with 2 to 5% organic matter - 2 pints
- Soils with 5 to 10% organic matter - 2 pints
- Use lower rate in rate range in areas receiving less than 20 inches total annual rainfall and irrigation.
