RECOMMENDATIONS

ULTRA GRO CALI KOOL is recommended for foliar use. Apply 2 - 6 quarts per acre with sufficient water for thorough coverage. For best results, do not spray when temperatures exceed 92°F. Foliar fertilization is intended to supplement standard ground fertility programs and will not by itself provide all nutrients normally required by agricultural crops.

Foliar Applications: ULTRA GRO CALI KOOL is a concentrated solution and should be diluted with water before use to ensure uniform coverage.

Aerial Applications: Apply ULTRA GRO CALI KOOL with at least 10 gallons of water per acre.

Suggested Application Rates

Foliar
