HEMP

CROP	DISEASE	RATE FL OZ PER ACRE	USE INFORMATION
Hemp	Web worm	Wrath Insecticide	Under conditions favorable for insect development, shorten the spray intervals and/or increase the rate of the tank-mix partner. For optimum results, begin applications as soon as crop and/or environmental conditions become favorable for insect development. Make applications on a 7 to 14 day interval depending upon insect populations and weather conditions. The use of adjuvants is recommended to increase efficacy
