Wrath can be applied to all crops via aerial at a rate of 18-66 ounces per acre per application depending on the severity of the insect population or the life cycle stage of the insect population. Application should be made as close to onset of population at economic threshold or before adult stages for superior control. Applications can be made anytime during season with enough water to provide through coverage. The use of a surfactant is suggested to increase the efficacy of Wrath. Wrath contains a 0 pre-harvest, 0 re-entry and has no minimum risk level issues for export.

The following should be followed to avoid drift.

- **Do not apply during temperature inversions.**
- **Do not apply when wind speeds exceed 10 miles per hour at the application site.**
- **Nozzels must be oriented so the spray is directed toward the back of the aircraft.**
- **Applicators must use 1/2 swath displacement upwind at the downwind edge of the field.**
- **The boom length must not exceed 65% of the wingspan for airplane or 75% of the rotor blade diameter for helicopters.**
- **Applicators are required to use Fine or Coarser droplet size (ASABE S772.1)**
